

Master of Science in Business Analytics (MSBA)

Learn to create and innovate using data with a STEM-designated Master's in Business Analytics from Gies College of Business at the University of Illinois. In less than a year, students develop the key skill set high-demand jobs require through a strong integration of business application area expertise.

Make data the foundation of your story

MSBA coursework includes foundations in managing, analyzing, and conveying business data, followed by analytics elective courses to deepen skills and understanding in business application areas such as finance, accountancy, and information systems. With only three core courses, students can really customize the degree to their specific interests. Core courses include:

**Enterprise Database Management • Big Data Analytics
Data Storytelling**

Admissions Information

Decisions are based on the individual's previous academic accomplishments, work experience, test scores, academic statement, résumé, demonstrated potential for graduate and professional success, and references.
