다음 글의 내용과 일치하지 않는 것은?¹ [H1-1811 36번]

Color can impact how you perceive weight. Dark colors look heavy, and bright colors look less so. Interior designers often paint darker colors below brighter colors to put the viewer at ease. Product displays work the same way. Place bright-colored products higher and dark-colored products lower, given that they are of similar size. This will look more stable and allow customers to comfortably browse the products from top to bottom. In contrast, shelving dark-colored products on top can create the illusion that they might fall over, which can be a source of anxiety for some shoppers. Black and white, which have a brightness of 0% and 100%, respectively, show the most dramatic difference in perceived weight. In fact, black is perceived to be twice as heavy as white. Carrying the same product in a black shopping bag, versus a white one, feels heavier. So, small but expensive products like neckties and accessories are often sold in dark-colored shopping bags or cases.

- ① The darker colors are, the heavier they look.
- ② Painting brighter colors above darker colors can have the viewers feel comfortable.
- ③ It may not be wise to put dark-colored products higher than bright-colored ones.
- ④ Some customers may feel uneasy watching products fall from the shelves.
- ⑤ Using a white shopping bag may help owners feel lighter.

다음 글에서 ㉠~㉦는 **black** 혹은 **white** 단어가 들어갈 자리이다. **black**이 들어가야 하는 자리의 기호를 모두 쓰시오.² [H1-1811 36번]
