

This is the Law of PRC on Prevention and Control of Environment Noise Pollution.

(1997)

Chapter IV

Prevention and Control of Construction Noise Pollution

Article 30 In an urban area where noise-sensitive structures are concentrated, construction operation that produces environmental noise pollution is forbidden at night, with the exception of rush repairs, rescue operations or continued operations required by production techniques or by special needs.

For continued operation due to special needs, there must be a permit issued by the people's government at or above the county level or by the relevant competent department under it.

Night operation mentioned in the preceding paragraph must be made known to the residents in the neighbourhood.

Chapter V Prevention and Control of Construction Noise Pollution

Article 39 The term " construction noise" as mentioned in this Law refers to the sound produced during the construction process that interferes with the surrounding living environment.

Article 40 The construction unit shall include the noise pollution prevention and control expenses in the project cost according to the regulations, and specify the noise pollution prevention and control responsibility of the construction unit in the construction contract.

The construction unit shall formulate an implementation plan for the prevention and control of noise pollution in accordance with regulations, and take effective measures to reduce vibration and noise. The construction unit shall supervise the construction unit to implement the implementation plan for the prevention and control of noise pollution.

Article 41 For construction operations in areas where noise-sensitive buildings are concentrated, priority shall be given to the use of low-noise construction techniques and equipment.

The competent department of industry and information technology of the State Council, together with the departments of ecological environment, housing and urban-rural construction, and market supervision and administration of the State Council, publish the guide list of low-noise construction equipment and update it in a timely manner.

Article 42 For construction operations in areas where noise-sensitive buildings are concentrated, the construction unit shall, in accordance with state regulations, set up an automatic noise monitoring system, network with the supervision and management department, keep the original monitoring records, and be responsible for the authenticity and accuracy of the monitoring data.

Article 43 In areas where noise-sensitive buildings are concentrated, construction operations that generate noise at night are prohibited, except for emergency repairs and emergency construction operations that require continuous construction operations due to production process requirements or other special needs.

If continuous construction is necessary due to special needs, a certificate from the local people's government's housing and urban-rural development and ecological environment department or the department designated by the local people's government shall be obtained, and it shall be publicized at a prominent position on the construction site or by other means to the nearby residents.
