If there's one thing koalas are good at, it's sleeping. For a long time many scientists suspected that koalas were so lethargic ①because the compounds in eucalyptus leaves kept the cute little animals in a drugged-out state. But more recent research has shown that the leaves are simply so low in nutrients ②that koalas have almost no energy. Therefore they tend to move as little as possible - and when they ③do move, they often look as though they're in slow motion. They rest sixteen to eighteen hours a day and spend most of that unconscious. In fact, koalas spend little time thinking; their brains actually appear to ④have shrunk over the last few centuries. The koala is the only known animal ⑤its brain only fills half of its skull.

*lethargic 무기력한 **drugged-out 몽롱한, 취한

7-G. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

Trying to produce everything yourself would mean you are using your time and resources to produce many things ①for which you are a high-cost provider. This would translate into lower production and income. For example, even though most doctors might be good at record keeping and arranging appointments, ②it is generally in their interest to hire someone to perform these services. The time doctors use to keep records is time they could have spent seeing patients. Because the time ③spent with their patients is worth a lot, the opportunity cost of record keeping for doctors will be high. Thus, doctors will almost always find it ④advantageous to hire someone else to keep and manage their records. Moreover, when the doctor specializes in the provision of physician services and ⑤hiring someone who has a comparative advantage in record keeping, costs will be lower and joint output larger than would otherwise be achievable.

As psychologists, we know only ①too well the vital role that beliefs and attitudes play in accomplishing any goal. More good intentions and great ideas are sacrificed ②because of limiting beliefs and negative attitudes than anything else we know. If you believe that you don't deserve \$1 million or that you could never earn that much money, the likelihood of your ever having it quickly ③go to zero. Relatively little has been written about beliefs, attitudes and intention as they relate to the field of finances. Like everything else, there are healthy beliefs and attitudes (those that help you reach your goals) as well as unhealthy ④ones (those that hold you back). The best thing about beliefs and attitudes is that they can easily ⑤be changed — more easily than people generally realize. While we may not have complete control over what happens to us in the physical world, we do, in fact, have the power to choose what beliefs, attitudes and thoughts we cultivate.

When accurate, assumptions keep you safe and make your life easier. For example, seeing storm clouds in the sky may prompt you to grab your umbrella, (a)[as / which] you assume you may need it even though it's not raining at the moment. Noticing an expired date on your yogurt and assuming it's no longer edible may save you from having to use one of your sick days. Imagine how tedious it would be if you had to research and (b) [check / checked] out every minute detail of your day to make sure you had every piece of information available. No one has that much time! But as useful as assumptions are, they can also get you into trouble. Not (c)[accurate / accurately] processing the information in your environment or only seeing what you want to see can lead to incorrect assumptions.

Scientists simply do not have the time nor the money to check up on the research of other scientists. Scientists in the academic community ①are busy with their teaching assignments, their graduate student supervision, and their own research programs. They are driven by the publish-or-perish attitude ②prevalent today. ③It simply does not benefit them in any way — no fame or fortune — to confirm or falsify the work of someone else. Scientists in industry have a bottom-line mentality. They must be productive in the areas ④which their company specializes. They have no time to check out the work of other scientists just for the fun of checking them out or ⑤to prove that science really is self-correcting. There are exceptions, but in practice this is normally the case.

We continually bring new items into our households without removing old items to accommodate them, (a)[what / which] creates a home filled to capacity and beyond. Since 1970, home sizes in the United States have increased from 1,500 square feet to between 2,000 and 2,500 square feet. Today many homeowners have a two-car garage in which they cannot fit a vehicle because it serves as a storage area. Whatever does not fit in the home (b)[is packed / packed] away in a rental storage unit. Consider a popular weight loss theory as a parallel: if calories in exceed calories out, weight is gained; if calories in are fewer than calories out, weight is lost; and if calories in equal calories out, weight is maintained. Is this not true of our living spaces? Our bodies may stretch, but unfortunately for our homes, our closets (c)[are / do] not!

- (a) (b) (c)
- ① what is packed are
② what packed do
③ which is packed do
④ which packed do
⑤ which is packed are
