

UltraKey Lite

**Keyboard controller for VideoBloX
and MAXPRO-Net Matrix Systems**

HJC5000

Installation and User Guide

Installation and User Guide

Revisions

Issue	Date	Revisions
800-03854 rev A	02/2009	New document.
800-03854 rev B	03/2009	Updated the MaxPRO map code.
800-03854 rev C	04/2009	Corrected the controller login PIN code; corrected IP address p. 59; updated images for quality
800-07422 rev A	08/2010	Revisions to Step 3: Configure Address, Baud Rate or IP for VideoBloX Mode ; Step 4: Configure VideoBloX Mode Default Settings While Powering Up ; Step 4: Configure the Controller for an Ethernet Connection ; added Step 5: Setting the Keyboard Address While Powering Up ; and, the System Configuration Menu screen.

Explanation of Symbols

WARNING! The exclamation point in a red octagon is a WARNING. Failure to take or avoid a specific action could result in **physical harm to a person or irreparable damage to equipment**.

Caution The lightning flash with arrowhead symbol within an equilateral triangle alerts the user to the presence of uninsulated dangerous voltage within the enclosure of the product that **may be of sufficient magnitude to constitute a risk of electric shock to the person**

Caution The exclamation point in a yellow equilateral triangle is a Caution. Failure to take or avoid a specified action could result in **loss of data or damage to equipment** and may contain important operating and maintenance servicing information.

FCC Compliance Statement

Information to the User: This equipment has been tested and found to comply with the limits for a Class B digital device. Pursuant to Part 15 of the FCC Rules, these limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference. For example, try orienting or relocating the receiving antenna, increasing the separation between the equipment and receiver, or connecting the equipment to an outlet on a different circuit.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Users of the product are responsible for checking and complying with all federal, state and local laws and statutes concerning the monitoring and recording of video and audio signals. Honeywell Systems Group shall not be held responsible for the use of this product in violation of current laws and statutes.

Canadian Compliance Statement

This Class B digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

European Compliance Statement

The manufacturer declares that the equipment supplied with this guide is compliant with the essential protection requirements of the EMC directive 2004/108/EC and the Low Voltage Directive LVD 2006/95/EC, conforming to the requirements of standards EN 55022 for emissions, EN 50130-4 for immunity, and EN 60065 for Electrical Equipment safety.

Caution Users of the product are responsible for checking and complying with all federal, state, and local laws and statutes concerning the monitoring and recording of video and audio signals. Honeywell shall not be held responsible for the use of this product in violation of current laws and statutes.

Warnings and Cautions

Read the following cautions and warnings prior to installation and use of this product.

Installation and servicing must be performed by qualified personnel in accordance with local codes and regulations.

Consider using a UPS source to ensure satisfactory performance.

Using replacement parts or accessories other than the original manufacturers may invalidate the warranty.

Important Safety Instructions

BEFORE OPERATING OR INSTALLING THE UNIT, READ AND FOLLOW ALL INSTRUCTIONS. AFTER INSTALLATION, retain the safety and operating instructions for future reference

1. **HEED WARNINGS** - Adhere to all warnings on the unit and in the operating instructions.
2. **INSTALLATION**
 - Install in accordance with the manufacturer's instructions.
 - Installation and servicing should be performed only by qualified and experienced technicians to conform to all local codes and to maintain your warranty.
 - Do not install the unit in an extremely hot or humid location, or in a place subject to dust or mechanical vibration. The unit is not designed to be waterproof. Exposure to rain or water may damage the unit.
3. **POWER SOURCES** - This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supplied to your facility, consult your product dealer or local power company.
4. **HEAT** - Situate away from items that produce heat or are heat sources such as radiators, heat registers, stoves, or other products (including amplifiers).
5. **WATER AND MOISTURE** - Do not use this unit near water or in an unprotected outdoor installation, or any area classified as a wet location.
6. **ATTACHMENTS** - Do not use attachments not recommended by the product manufacturer as they may result in the risk of fire, electric shock, or injury to persons.
7. **ACCESSORIES** - Only use accessories specified by the manufacturer.
8. **CLEANING** - Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
9. **SERVICING** - Do not attempt to service this unit yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

10. **REPLACEMENT PARTS** - When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

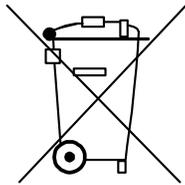

Warranty and Service

Subject to the terms and conditions listed on the Product Warranty Card, during the warranty period Honeywell will repair or replace, at its sole option, free of charge, any defective products returned prepaid.

In the event you have a problem with any Honeywell product, call Customer Service for assistance or to request a **Return Merchandise Authorization (RMA)** number. Be sure to have the model number, serial number, and the nature of the problem available for the technical service representative.

In the U.S.A. and Canada, call 1.800.796.2288. See the back cover for other contact details.

Prior authorization must be obtained for all returns, exchanges, or credits. **Items shipped to Honeywell without a clearly identified Return Merchandise Authorization (RMA) number may be refused.**

WEEE (Waste Electrical and Electronic Equipment). Correct disposal of this product (applicable in the European Union and other European countries with separate collection systems). This product should be disposed of, at the end of its useful life, as per applicable local laws, regulations, and procedures

About this Document and the UltraKey Lite

In this section:

- [Document Overview](#), page 15
- [Finding More Information](#), page 16
- [Typographical Conventions](#), page 16
- [UltraKey Lite Specifications](#), page 17
- [Shipping Checklist](#), page 18
- [UltraKey Lite Port Connections and Descriptions](#), page 19

The UltraKey Lite (HJC5000) is a replacement for the Honeywell HEGSBLX controller and is compatible with Honeywell VideoBloX and MAXPRO-Net Video Matrix Systems.

The UltraKey Lite has these modes available depending on the installation:

- MAXPRO: For use with MAXPRO-Net Matrix System installations.
- VideoBloX: For use with VideoBloX Matrix System installations.

Note This installation and user guide describes the Honeywell VideoBloX and MAXPRO-Net Video Matrix mode installation and set-up. Future product and documentation releases will include the Standalone mode for PTZ and DVR functionality.

Document Overview

The following is included in this user guide:

- UltraKey Lite controller user instructions ([Chapter 2](#)).
- Installation/connection and configuration instructions specific to VideoBloX ([Chapter 3](#)) and MAXPRO-Net ([Chapter 4](#)).
- System Administration and troubleshooting ([Chapter 5](#)).

Finding More Information

Refer to the online literature library to access other electronic documents in PDF format including data sheets, quick references, installation and user guides, specifications, software and product notices: <http://www.honeywellvideo.com>. Also see the back cover for international web sites and contact details.

Typographical Conventions

This document uses these typographical conventions:

Font	What it represents	Example
Use of an arrow between items >	Use of an arrow between keys or tabs indicates the order to select a menu item from the LCD or a web browser. You may be using keys on the controller or a mouse to click and select a tab on a web browser	1. On the controller, press Alt > Ctr to enter the System Configuration: System Set menu. The System Set: Mode screen displays.
Lucida	Values of editable fields that are mentioned in the body text of the document for reference purposes, but do not need to be entered as part of a procedure.	The Time from field can be set to Hours:Minute:Seconds.
	Text strings displayed on the screen. Syntax.	The message Unauthorized displays. (object) entered
Swiss721 BT Bold	Words or characters that are part of the task process and identify a field and an action that must be typed.	Enter the password 1234 .
	Menu titles and other items you select.	Double-click Open from the File menu.
	Buttons you click on a web browser to perform actions.	Click Exit to close the program.
	Pressing a key on the keyboard.	Press and hold Logon .
Courier	Text that displays on the LCD screen	The LCD menu IPAddr Changed displays. 
<i>Italic</i>	Placeholders: words that vary depending on the situation.	<i>user name</i>
	Cross-reference to external source.	Refer to the <i>System Administrator Guide</i> .
	Cross-reference within document.	See <i>Chapter 2, Installation</i> .

UltraKey Lite Specifications

Table 1-1 UltraKey Lite Specifications

Parameter	Value
Power Requirements	10.8 to 13.2 VDC @ 1 Ampere (A) or POE (48 VDC, Class 3)
Connector Types	1×Ethernet (10Base-T, 100Base-TX) RJ45 with LED 1×RS232/422/485 RJ45 with LED
LCD	Type: STN, Positive Image Backlight: Blue-White Characters: 122×32 Dots
USB	Type: A Version: USB1.1 (For USB PC Keyboard)
Compliance	EN55022 for radiated and conducted emissions
Mechanical	Dimensions: 408 mm (L) × 215 mm (W) × 105 mm (H) Gross Weight: 3.2 kg Cover material: ABS+PC (cool gray)
Environment	Operating Temperature: -10 to +55 deg C Storage Temperature: -40 to +75 deg C Humidity: 0 to 95% RH (non-condensing)

Shipping Checklist

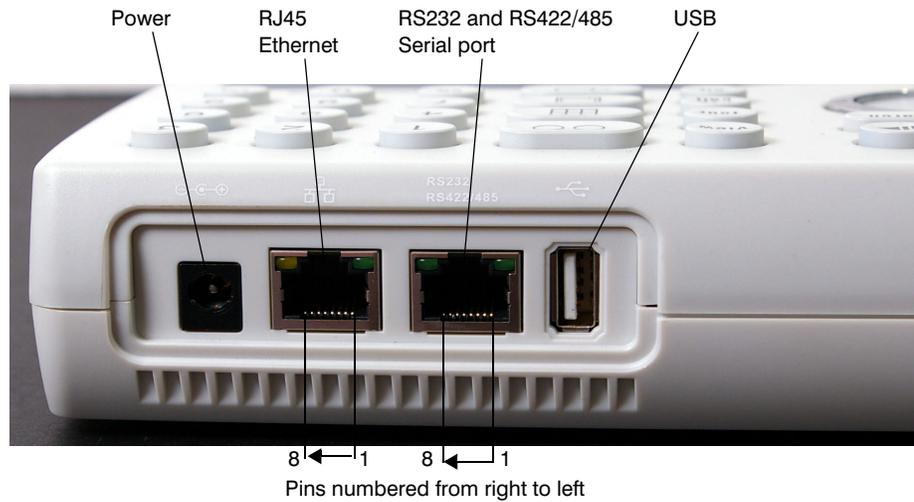

The following is included with your UltraKey Lite Controller shipment. Use of accessories is dependent on the type of installation. Ultrakey Lite can be connected to the matrix system either by serial port or Ethernet RJ45 connections.

Table 1-2 Shipping Checklist

Quantity	Part	Use with...
1	Ultrakey Lite keyboard controller	All installations.
1	Ultrakey Lite installation and user guide	All installations.
1 box	Power adapter with plugs for 100-240 VAC, 12 VDC, 50-60 HZ, 1 A, 12 W	Plug adapters depend on local electrical current. Four models are included: <ul style="list-style-type: none"> • CEE 7/16 (Europlug 2.5 A/250V unearthed) • NEMA 1-15 (North American 15 A/125V ungrounded) • BS1363 (British 13A /230-240V 50 Hz earthed and fused) • CPCS-CCC (Chinese 10 A/250V)/AS 3112 ; Australian 10 A/240V).
		
1	Connector adapter, RJ45 to DB9 male, for RS422	 Backwards compatibility with VideoBloX and VideoBloX Lite CPU installations. VideoBloX master port.
2	Connector adapter, RJ45 to DB9 female, for RS232	 Backwards compatibility with MAXPRO-Net CPU installations.
2	RJ45 network cable, 2 meters	All installations.
1	RJ45 cross-over Ethernet cable, 2 meters, blue	Used to connect a PC directly to the Controller for web browser configurations.
1	RJ11 4X6 flat ribbon cable, 2 meters	To connect from a MAXPRO and MX18 to the UltraKey Lite.
1	Function key overlay	For use with VideoBloX installations.
1	Terminal box	For additional device connection requirements.
		

UltraKey Lite Port Connections and Descriptions

Figure 1-1 UltraKey Lite Port Connections

DC Power Port

Supports 12V ($\pm 10\%$) DC/1 A power input. Use the power adapter included with the shipment and insert one of the four adapters based on your local power requirements.

Ethernet Port

Note Ethernet is used to connect to the controller web browser, MAXPRO-Net or VideoBloX NetCPU.

- 10/100M Ethernet PoE (power over Ethernet) input. If PoE is the power input, it is not recommended to connect this network with an outside building.
- TCP/IP protocol on the controller.
- For VideoBloX, the controller address range can be between 1 and 32. For MAXPRO-Net, the address range can be between 1 and 99.

RS232, RS422/485 Serial Port

Note These ports are used to connect to MAXPRO-Net RS232 or RS422 and to VideoBloX NetCPU, Standard CPU and Lite CPU RS422.

An isolated surge protection is suggested when using RS485/RS422 and when cabling between buildings.

Note For MAXPRO net installations, COM1 (RS422) and COM2 (RS485) are configured using the controller LCD menu and cannot be used at the same time.

Note Serial port 1 can be either RS485 or RS422. Serial port 2 is only RS232.

Terminal Box

Use the terminal box RJ45 port and 8-pin terminal plug as required for compatibility and connectivity options. It can be used to break out the RJ45 cable when wiring to existing infrastructure is required.

Figure 1-2 Terminal Box Front and Back Ports

USB Port

The USB port is not used with VideoBloX or MAXPRO-net.

Using the UltraKey Lite Controller

You may need to learn how to use the UltraKey Lite both before and after you begin configuring. In this section:

- [Logging Onto the Controller](#), page 21
- [Using the UltraKey Lite to Navigate the LCD Menus](#), page 22
- [VideoBloX Key Functions](#), page 24
- [MAXPRO Key Functions](#), page 27

Note Key availability is dependent on the mode selected. Functions only used with the Standalone Mode (for PTZ/DVR functions) are not described in this document and will be included in future releases.

Logging Onto the Controller

1. Connect the keyboard with a power adapter (12V ($\pm 10\%$) DC/1 A included) or a network cable with PoE.
2. To configure the main menu settings, press **Alt > Clr**.
3. Enter the PIN password **3434**.

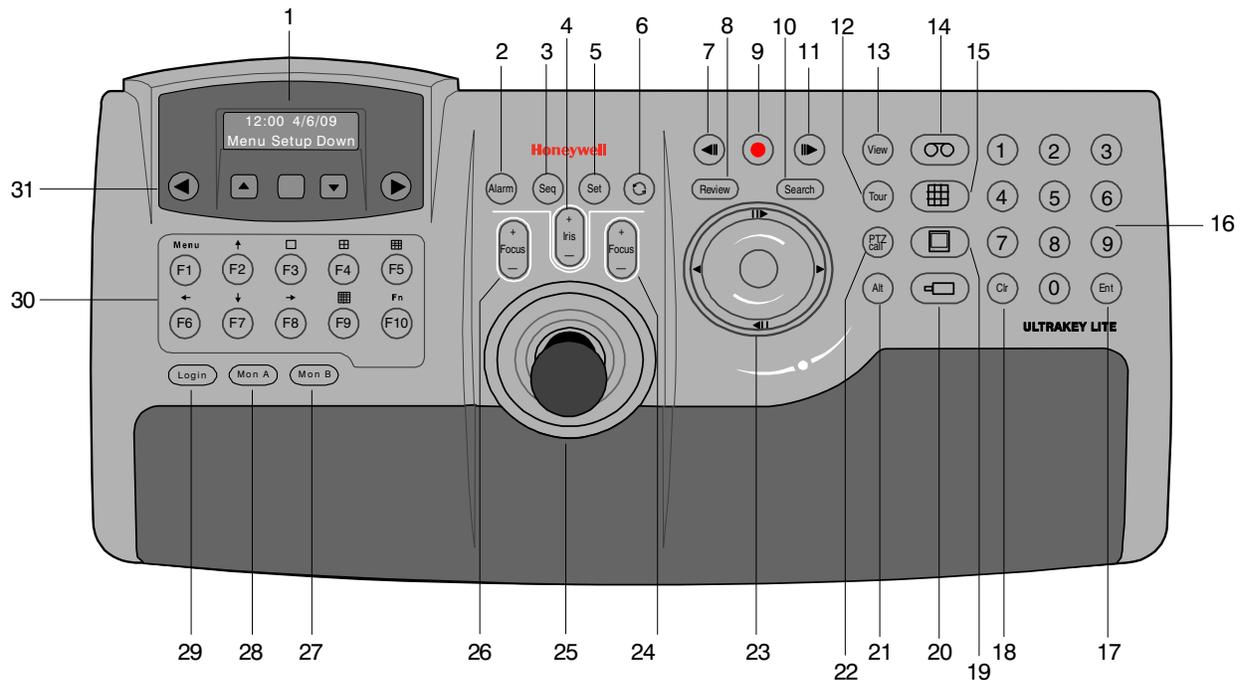

Note If an invalid password is entered, a message displays and the controller buzzes. Repeat the steps to log on.

When you are in the Password menu, press **Alt > Clr** again to exit the Password menu.

Using the UltraKey Lite to Navigate the LCD Menu

There are a variety of ways to navigate both the LCD menu during configuration and set up as well as during normal operation with your matrix system. [Figure 2-1](#) shows all of the keys and other elements of the UltraKey Lite controller. See [Table 2-2](#) for UltraKey Lite key functions when used with a VideoBloX system. See [Table 2-3](#) for UltraKey Lite key functions when used with a MAXPRO-Net system.

Figure 2-1 UltraKey Lite Controller Keyboard Layout

See [Figure 2-2](#) for a brief overview of the three main navigation options. See [Table 2-1](#) for specific methods to navigate the LCD during installation and set up.

Installing UltraKey Lite with VideoBloX

In this section:

- [Navigating the LCD Configuration Menus](#), page 31
- [Installing and Configuring a Serial Connection](#), page 32
- [Installing and Configuring an Ethernet Connection](#), page 36
- [\(Optional\) Configuring UltraKey Lite Using the Web Browser](#), page 41

Note For all installations, refer to the applicable VideoBloX or VideoBloX Lite installation or user guides for more information.

This section explains how to connect the UltraKey Lite controller to VideoBloX and how to enter the basic configuration settings specific to VideoBloX. UltraKey Lite can control the remote VideoBloX via either the serial port or the Ethernet.

Navigating the LCD Configuration Menus

Note The use of the arrow keys under the LCD is used for the following instructions. See [Figure 3-1](#). Also see [Using the UltraKey Lite to Navigate the LCD Menus](#) on page 22 for detailed instructions for other ways to navigate or [System Administration Using the Controller LCD](#) on page 65 for a configuration menu tree.

Figure 3-1 LCD and LCD Navigation Keys

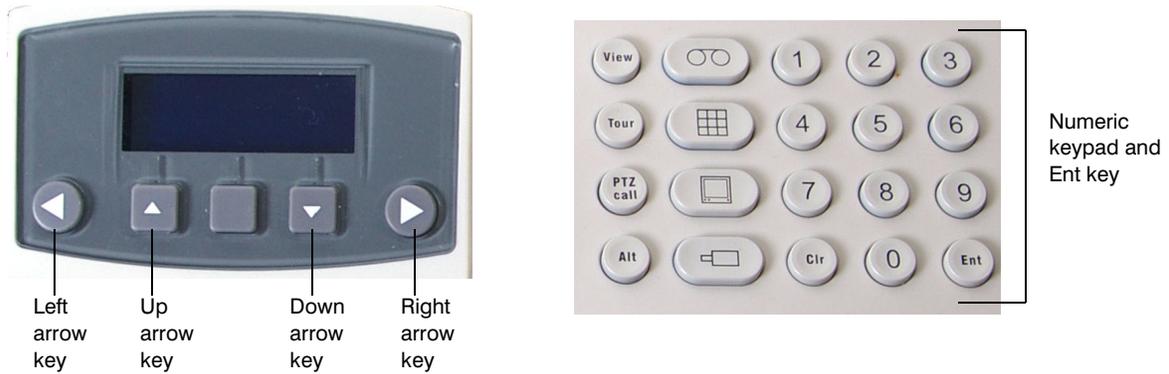

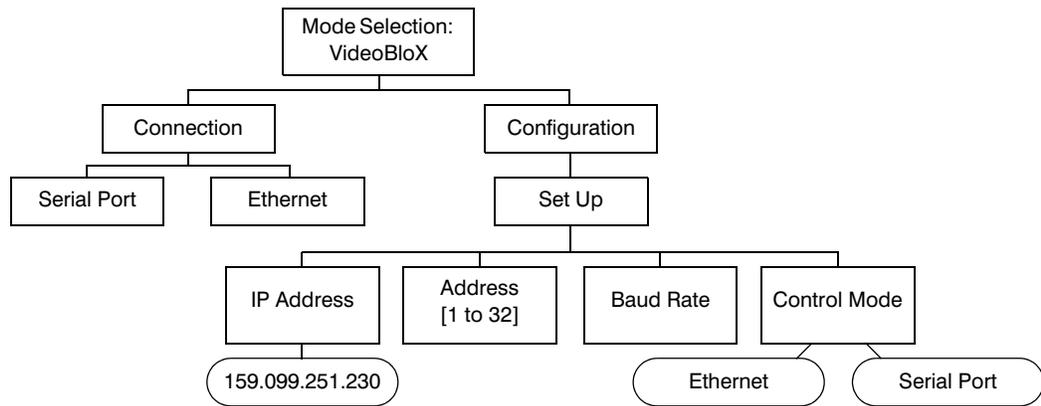

Figure 3-2 VideoBloX LCD Configuration Menu Tree

Installing and Configuring a Serial Connection

Step 1: Connect to the UltraKey Lite Using the Serial Port

Note Use only COM1 when in VideoBloX mode. See [Table 3-1](#) below.

Table 3-1 Serial Port COM1 and COM2 Pin Assignments

Serial Port	Type	Pin	Signal
COM1	RS422	1	RX +
		2	RX -
		5	GND
		7	TX -
		8	TX +
	RS485	7	T/R -
		8	T/R +

Note For a list of accessories see [Shipping Checklist](#) on page 18 and for port connections see [UltraKey Lite Port Connections and Descriptions](#) on page 19.

1. Select the applicable adapter plug and insert it into the AC adapter. Push to click it into place. See [Figure 3-3](#).
2. Plug the AC adapter into the controller power port and the adapter into a power source.
3. Connect an RJ45 network cable to the controller serial port.
4. Connect the RJ45 network cable to VideoBloX:
 - For backwards compatibility with VideoBloX and VideoBloX Lite CPUs, an RJ45 to DB9 male adapter is required and included with your shipment. See [Figure 3-4](#).
 - For VideoBloX NetCPU, the installation is a direct connection with the RJ45 network cable, also included. See [Figure 3-5](#) and [Figure 3-6](#).

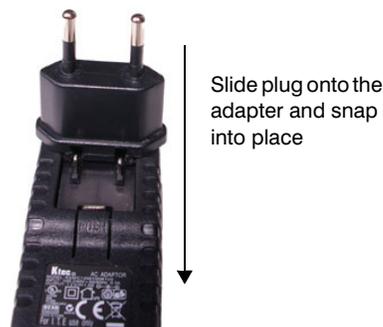

Figure 3-3 AC Power Adapter with CEE 7/16 Europlug

Figure 3-4 RJ45 to DB9 Male Adapter for VideoBloX and VideoBloX Lite CPUs

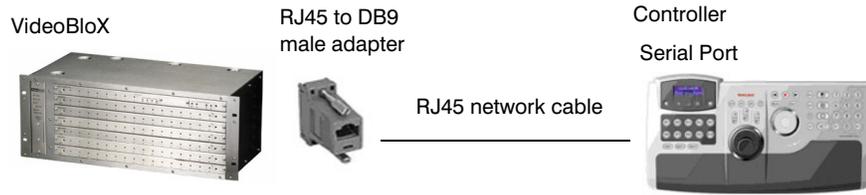

Figure 3-5 Direct RJ45 Serial Port Connection for VideoBloX NetCPUs

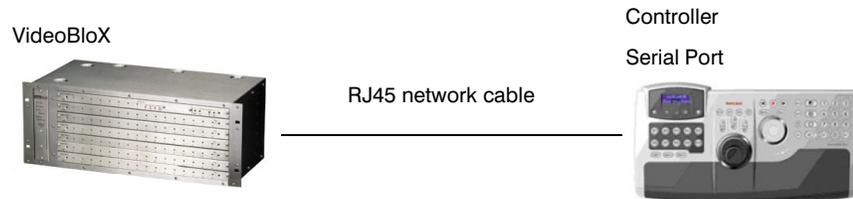

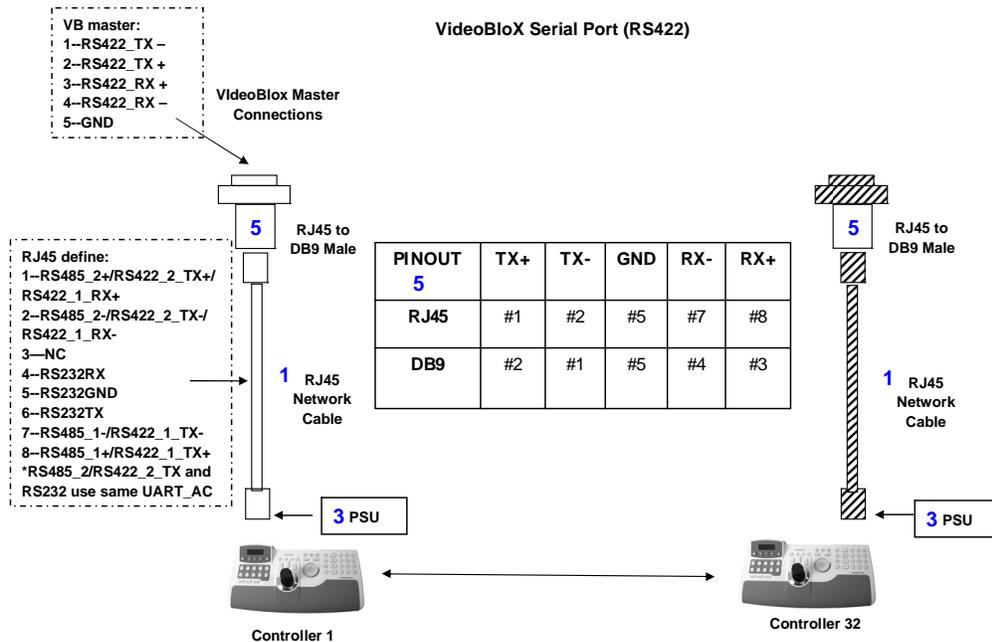

Figure 3-6 VideoBloX Serial Port RS422 Connection Example

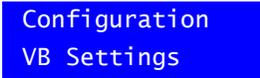

Step 2: Configure the Controller for VideoBloX Mode

Note The controller factory defaults are **VideoBloX mode**, **Address 1**, **baud rate 19200 bps**. If any other mode has been selected then use the following steps to select VideoBloX mode. Otherwise skip to [Step 3: Configure Address, Baud Rate or IP for VideoBloX Mode](#), page 35.

1. If not already done, install and connect the controller to a power source.
2. From the home screen, press **Alt > Clr** to enter the **System Configuration: System Set** menu.
3. Enter the PIN password **3434**.
The **System Set: Mode** screen displays.
4. Press the LCD right arrow key to enter the **Mode Selection** menu.
5. Scroll to and select **VideoBloX**. Press **Ent**.

Step 3: Configure Address, Baud Rate or IP for VideoBloX Mode

1. Press **Alt > Clr**. If prompted, enter the password **3434** to enter the **System Set** top menu.
2. Press the LCD down arrow to scroll to the **System Set: Config** menu. 
3. Press the right arrow key to enter the **Configuration** menus.
4. Press the LCD up/down arrow keys to scroll through the options (restore default, VB settings, maxpro settings, network, language, back light, slider update, hardware test, about).
5. Scroll to the **Configuration: VB Settings** menu, then press **Ent**. 
6. Press the LCD right arrow key to scroll to enter the **VB Settings** menu. 
7. Press the right arrow key to scroll through the **Set Up** menu to the **Control Mode** submenu. The current setting is displayed (Serial Port or Ethernet). 
8. Press the up/down arrow keys to scroll to **Serial Port** then press **Ent**.
9. Press the LCD right arrow key to scroll to **Set Up: Address**.
10. Use the LCD up/down arrow keys to scroll to an address between 1 and 32 to assign to the controller. You can also use the numeric keypad to enter a number between 1 and 32. However, if you enter a number greater than 32, the message **Invalid ID** displays on the LCD.
11. Press **Ent**.
12. Press the LCD right arrow key to scroll to **Set Up: Baud Rate**.
13. Press the LCD up/down arrow keys to select a baud rate. **1200 bps**, **9600**, **19.2 KB** (default for VideoBloX) or **57.6 KB bps** are available for VideoBloX.
14. Press **Ent**.
15. If you are using the TCP/IP to connect to a VideoBloX NetCPU, then press the LCD right arrow key to scroll to **Set Up: IP Address**. Press **Ent**. 

Note In this field, you are setting the VideoBloX NetCPU IP address. To set the UltraKey Lite IP address or enter the main configuration menus, press **Alt > Ctr** and see [Step 3: Set and Configure for an Ethernet Connection](#) on page 38.

16. Use the numeric keypad to enter an IP address as required, then press **Ent**.

IP Address
159.099.251.230

Step 4: Configure VideoBloX Mode Default Settings While Powering Up

1. While powering up, when the **Time Left 3** menu displays, press **Alt > Camera** to set the VideoBloX mode.
2. Set the corresponding serial port as:

Baud Rate: **19.2 KB**
Data Bit: **8**
Parity: **None**
Stop Bit: **1**

Time Left 3

Installing and Configuring an Ethernet Connection

For a list of accessories see [Shipping Checklist](#) on page 18 and for port connections and pin assignments see [UltraKey Lite Port Connections and Descriptions](#) on page 19. The UltraKey Lite Controller runs TCP/IP keyboard protocol.

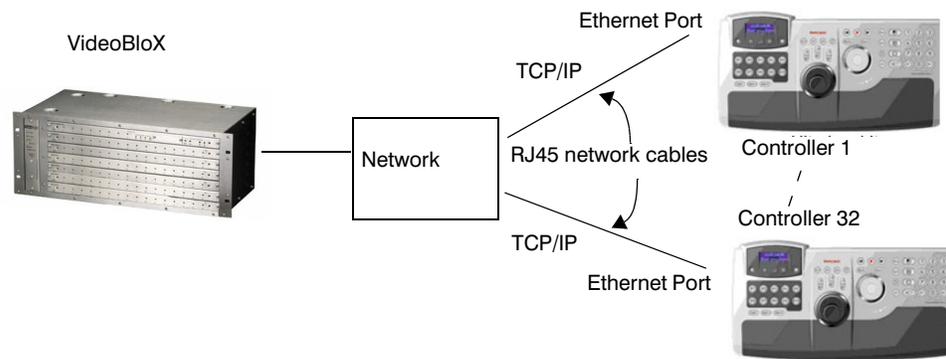

Step 1: Connect to the UltraKey Lite Ethernet Port

Note The direct RJ45 connection using the Ethernet port is only available with newer model VideoBloX NetCPU systems.

Table 3-2 RJ45 Ethernet Pin Assignments

Port	Pin	Signal
RJ45 Ethernet	1	TX +
	2	TX -
	3	RX+
	6	RX -

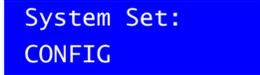

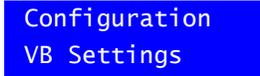

1. Select the applicable adapter plug and insert it into the AC adapter. Push to click it into place. See [Figure 3-3](#).
2. Plug the AC adapter into the controller power port and the adapter into a power source.
3. Plug an RJ45 network cable from the network to the controller Ethernet port. Up to 32 controllers can be connected to the network. See [Figure 3-7](#).
4. Connect VideoBloX to the network. Refer to the applicable [VideoBloX Installation Guide](#) for instructions.

Figure 3-7 Ethernet Port Connections to VideoBloX

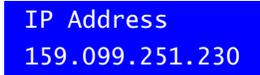

Step 2: Configure the Controller for VideoBloX Mode

Note The controller factory defaults are VideoBloX mode, Address 1, baud rate 19200 bps. If any other mode has been selected then see [Step 2: Configure the Controller for VideoBloX Mode](#) on page 34 to select VideoBloX mode. Otherwise skip to the next step.

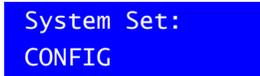

Step 3: Set and Configure for an Ethernet Connection

1. Press **Alt > Clr**. If prompted, enter the password **3434** to enter the **System Set** top menu.
2. Press the LCD down arrow to scroll to the **System Set: Config** menu. 
3. Press the right arrow key to enter the **Configuration** menus.
4. Press the LCD up/down arrow keys to scroll through the options (restore default, VB settings, maxpro settings, network, language, back light, slider update, hardware test, about).
5. Scroll to the **Configuration: VB settings** menu, then press **Ent**. 
6. Press the right arrow key to enter the **Set Up** menu.
7. Press the right arrow key to scroll through the **Set Up** menu to the **Control Mode** submenu. The current setting is displayed (Serial Port or Ethernet). 
8. Press the LCD up/down arrow keys to scroll to **Ethernet**. 
9. Press **Ent**.
The Set Up: IP Address menu displays.
10. Press **Ent**.

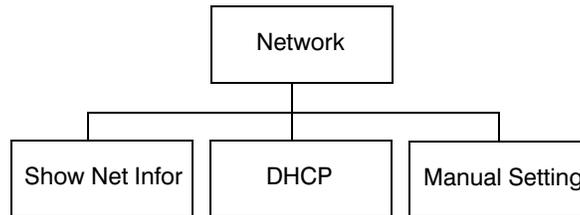

Note In this field, you are setting the VideoBloX NetCPU IP address. To set the UltraKey Lite IP address or enter the main configuration menus, press **Alt > Clr**.

11. Use the numeric keypad to enter an IP address as required, then press **Ent**. 
12. Press the LCD right arrow key to scroll to **Set Up: Address**.
13. Use the LCD up/down arrow keys to scroll to an address between **1** and **32** to assign to the controller. You can also use the numeric keypad to enter a number between 1 and 32. However, if you enter a number greater than 32, the message **Invalid ID** displays on the LCD.
14. Press **Ent**.

Step 4: Configure the Controller for an Ethernet Connection

1. Press **Alt > Clr** to exit from the VideoBloX configuration menu.
2. Press **Alt > Clr** a second time to enter the **System Set** top menu.
3. Press the LCD down arrow key to scroll to the **System Set: Config** menu. 
4. Press the right arrow key to enter the **Configuration** menus.

5. Press the LCD up/down arrow keys to scroll through the options (serial port, network, language, back light, slider update, cascade linkage, hardware test, about).
6. Scroll to the **Configuration: Network** menu, then press **Ent**.
7. There are three sub-menus in this menu (Show Net Infor, DHCP, and Manual Settings). The structure is as follows:

Configuration
Network

Network:
DHCP

Network:
Show Net Infor

Network:
Manual Setting

Show Net Infor Menu

The Show Net Infor Menu displays the Network information, including IP Address, DNS, Gateway, and Netmask.

Automatically Configuring the Network Using DHCP

The Dynamic Host Configuration Protocol (DHCP) is a computer networking protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network. It is used to configure the network automatically.

Automatically configuring the network using the **DHCP** menu:

1. Press the LCD down arrow to scroll to the **Network: DHCP** menu.
2. Press **Ent** and the keyboard's network will be configured automatically.
 - If the network configuration is successful, then a Succeeded! message displays.
 - If the network configuration was not successful, then a Failed! message displays.

Network:
DHCP

Please wait....

Succeeded!

Failed!

When the network configures successfully, the user can enter the Show Net Infor menu to see the IP Address, IP Address, DNS, Gateway and Netmask.

Network:
Manual Setting

Manually Configuring the Network

Manually configuring the network using the **Manual Setting** menu:

1. Press the LCD down arrow key to scroll to the **Network: Manual Setting** menu

2. When you are at the Network: Manual Setting menu, press **Ent**, then press the LCD up/down arrow keys to set the UltraKeyLite network parameters (IP address, gateway, netmask and DNS).
3. Press the LCD up/down arrow keys to scroll through the menu options to select **IP Address**, then press **Ent** to select.

Network:
IP Address

 - a. Using the numeric key pad, enter an IP address, then press **Ent** to save.
The LCD menu displays the message: IPAddr Changed.

IP Address
159.099.251.230
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent**.

IP Addr Changed
Yes

Note In this field, you are setting the UltraKey Lite IP address. To set the VideoBloX IP address (for communication purposes), see [Step 3: Set and Configure for an Ethernet Connection](#).

4. Press the LCD up/down arrow keys to scroll through the menu options and select **Gateway**. Press **Ent**.
 - a. Using the number keys, enter a Gateway as required, then press **Ent** to save. The LCD menu displays the message: GW Changed.
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent**.
5. Press the LCD up/down arrow keys to scroll through the menu options and select **NetMask**. Press **Ent**.
 - a. Using the number keys, enter a NetMask as required, then press **Ent** to save. The LCD menu displays the message: NetMsk Changed.
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent**.
6. Press the LCD up/down arrow keys to scroll through the menu options and select **DNS**. Press **Ent**.
 - a. Using the number keys, enter a DNS as required, then press **Ent** to save. The LCD menu displays the message: DNS Changed.
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent** to save.

Step 5: Setting the Keyboard Address While Powering Up

While powering up, when the **Time Left 3** menu displays, press certain keys (see [Table 3-3](#)) to set the keyboard address.

Table 3-3 **Setting the Keyboard Address**

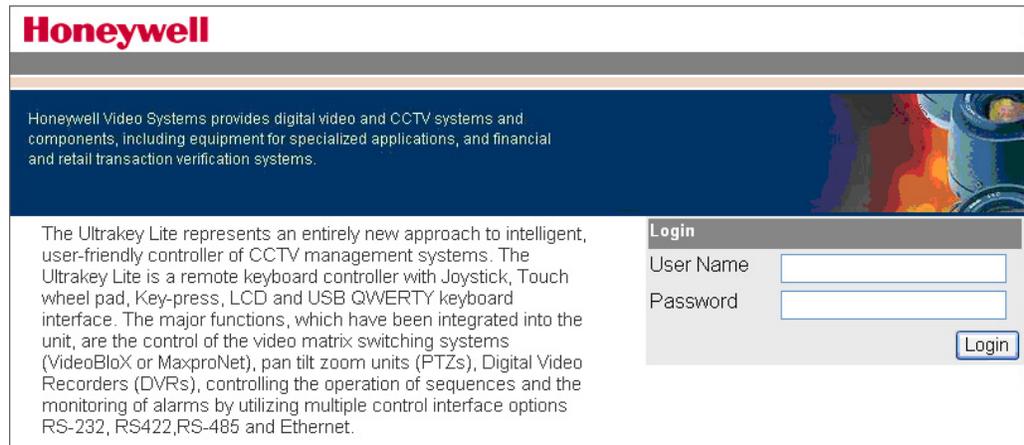

Key	Address	Key	Address
Alt > 1	1	Alt > F1	11
Alt > 2	2	Alt > F2	12
Alt > 3	3	Alt > F3	13
Alt > 4	4	Alt > F4	14
Alt > 5	5	Alt > F5	15
Alt > 6	6	Alt > F6	16
Alt > 7	7	Alt > F7	17
Alt > 8	8	Alt > F8	18
Alt > 9	9	Alt > F9	19
Alt > 0	10	Alt > F10	20

(Optional) Configuring UltraKey Lite Using the Web Browser

Logging into the Web Browser

1. If not already done, navigate to, or copy and paste, the applicable IP address into your web browser:
 - LAN connections: for example, **http://192.168.1.9**
 - Crossover cable connections: for example, **http://192.168.1.9** (default)
2. In the **User Name** field enter **Administrator** (case sensitive).
3. In the **Password** field enter **1234** (default).
4. Click **Login**.

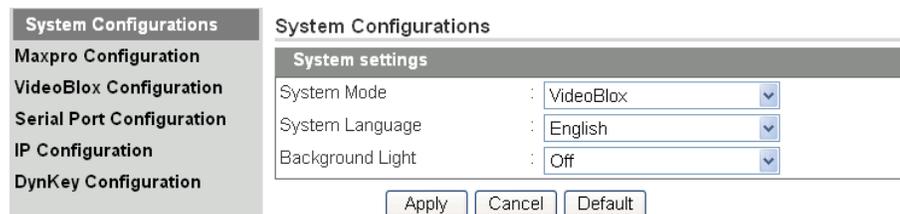

Figure 3-8 UltraKey Lite Login Page

Step 1: Configure UltraKey Lite to VideoBloX Mode

1. Log into the web browser.
2. From the top menu, click the **Configuration** tab. See [Figure 3-9](#).
3. From the side menu, click the **System Configurations** tab.
4. From the **System Mode** drop down list, select **VideoBloX**.
5. From the **System Language** drop down list, select **English** or **French**.
6. From the **Background Light** drop down list select **ON** or **OFF**.
7. Click **Apply** to save the configuration, **Cancel** to exit without saving or **Default** to restore all factory default values.

Figure 3-9 System Configuration Tab

Step 2: Configure VideoBloX Network Settings

1. From the side menu, click **VideoBloX Configuration**. See [Figure 3-10](#).
2. Under **Keyboard ID Setting**, enter a number between 1 and 32 to set the controller ID.

Note By default, addresses 1– 5 in the VideoBloX NetCPU are set for serial connection. Please change this in the NetCPU configuration if you want to use addresses 1– 5 for Ethernet connection.

3. Under **VB Device Network Setting**, enter the **IP address** and **Port Number** of the VideoBloX system.
4. Click **Apply** to save the configuration, **Cancel** to exit without saving, or **Default** to restore all factory default values.
5. Go to either Step 3A or 3B to configure the system for Serial or Ethernet connections respectively.

Figure 3-10 VideoBloX Configuration Tab

VideoBloX Configuration

Keyboard ID Setting	
KeyboardID	: <input type="text" value="1"/> (Range: 1 ~ 32)
VideoBloX NetCPU IP settings	
IP address	: <input type="text" value="192"/> <input type="text" value="168"/> <input type="text" value="1"/> <input type="text" value="11"/> <input type="button" value="Ping"/>
Port number	: <input type="text" value="26026"/>

Checking the Network Connection Using the Ping Function

After the IP address is entered and applied, press the **Ping** button.

- A green Ping button indicates the device at this IP address has replied to the ping.
- A red Ping button indicates the device at the IP address did not reply. Please check that the IP address is correct and that there is a valid network path between the two IP addresses.

Step 3A: Configure the Controller for a Serial Port Connection

1. From the side menu, click **Serial Port Configuration**. See [Figure 3-11](#).

2. Under **Serial Port1 Settings**, select the following from each drop-down list as required:
 - **Baud Rate:** 1200, 9600, 19200 or 57600 bps.
The default for VideoBloX is 19200.
 - **Parity:** none
 - **Stop Bits:** 1 bit
 - **Data Bits:** 8 bits
 - **Serial Mode:** RS422
3. Click **Apply** to save the configuration, **Cancel** to exit without saving, or **Default** to restore all factory default values.

Figure 3-11 Serial Port Configuration Tab

The screenshot shows a configuration window with a sidebar on the left containing the following menu items: System Configurations, Maxpro Configuration, VideoBloX Configuration, **Serial Port Configuration**, IP Configuration, and DynKey Configuration. The main area is titled 'Serial Port Configurations' and is divided into two sections: 'Serial Port1 settings' and 'Serial Port2 settings'. At the bottom are three buttons: 'Apply', 'Cancel', and 'Default'.

Serial Port1 settings	
Baud Rate	19200 bps
Parity	None
Stop Bits	1 Stop Bit
Data Bits	8 Data Bits
Serial Mode	RS422

Serial Port2 settings	
Baud Rate	19200 bps
Parity	Even Parity
Stop Bits	1 Stop Bit
Data Bits	7 Data Bits
Serial Mode	RS232

Step 3B: Configure the Controller for an Ethernet Connection

1. From the side menu, click **IP Configuration**. See [Figure 3-12](#).
2. In each of the fields, enter **IP address, subnet mask, gateway and DNS** values.
3. Click **Apply** to save the configuration, **Cancel** to exit without saving, or **Default** to restore all factory default values.

Figure 3-12 IP Configuration Tab

The screenshot shows a configuration window with a sidebar on the left containing the following menu items: System Configurations, Maxpro Configuration, VideoBloX Configuration, Serial Port Configuration, **IP Configuration**, and DynKey Configuration. The main area is titled 'IP Configurations' and contains four rows of input fields for IP Address, Subnet Mask, Gateway, and DNS. At the bottom are three buttons: 'Apply', 'Cancel', and 'Default'.

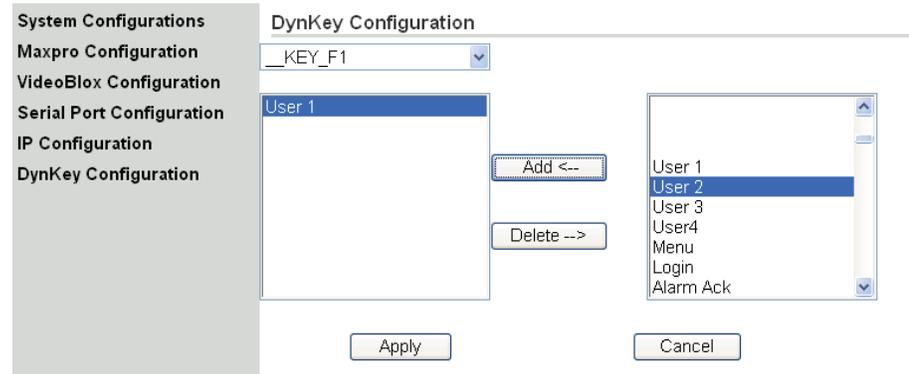

IP Address :	159	99	242	221
Subnet Mask :	255	255	255	0
Gateway :	159	99	242	1
DNS :	192	168	1	1

Step 4: Configuring the Dynamic Keys

You can configure the hard keys on the web server.

1. From the side menu, click **DynKey Configuration**.

Figure 3-13 DynKey Configuration Tab

2. In the drop-down menu, select the key you want to configure.
3. In the right column, select the function you want to add to the hard key, then click **Add**.
That selected function appears in the center column.
4. Repeat [step 3](#) to add another function to the selected hard key.
5. Click **Apply** to save.

Note No more than 10 functions can be configured to a hard key.

Note Neither the number key (#) nor the Logon key can be configured.

Installing UltraKey Lite with MAXPRO-Net

In this section:

- [Navigating the LCD Configuration Menus](#), page 47
- [Installing and Configuring a Serial Connection](#), page 49
- [Installing and Configuring an Ethernet Connection](#), page 56
- [\(Optional\) Configuring UltraKey Lite Using the Web Browser](#), page 60

Note For all installations, refer to the applicable MAXPRO-Net installation or user guides for more information.

This section explains how to connect the UltraKey Lite controller to MAXPRO-Net and how to enter the basic configuration settings specific to MAXPRO-Net. For other user configurations see the index or table of contents.

Navigating the LCD Configuration Menus

Note The use of the arrow keys under the LCD is used for the following instructions. See [Figure 4-1](#). Also see [Using the UltraKey Lite to Navigate the LCD Menus](#) on page 22 for detailed instructions for other ways to navigate or [System Administration Using the Controller LCD](#) on page 65 for a configuration menu tree.

Figure 4-1 LCD and Navigation Keys

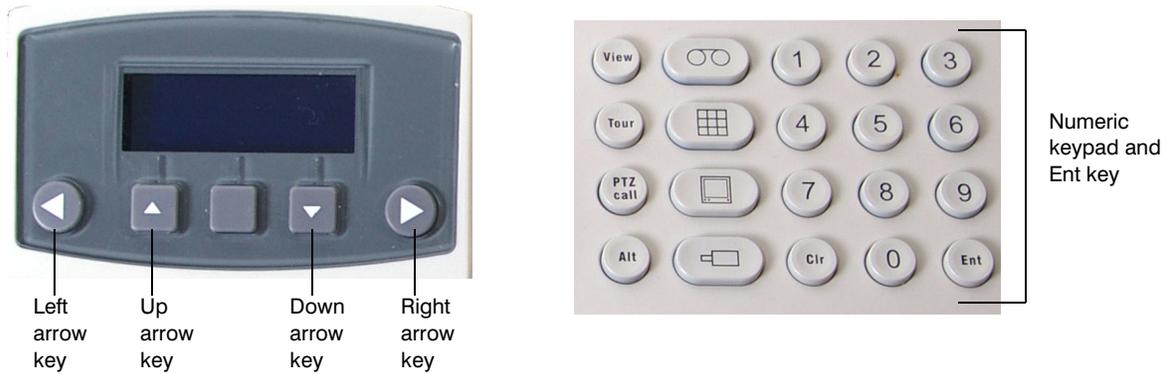

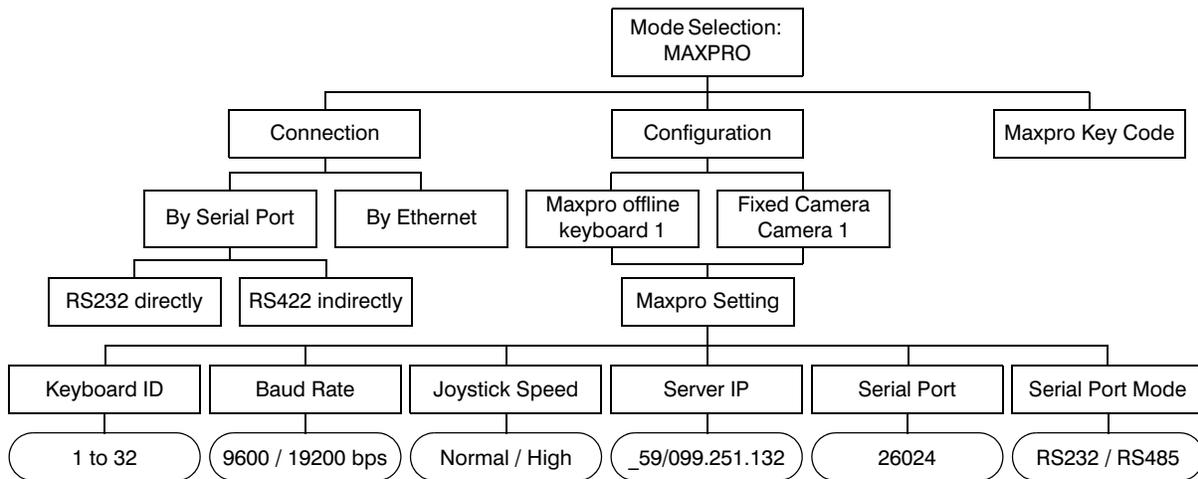

Figure 4-2 MAXPRO LCD Menu Tree

From the MAXPRO settings menu, you set the following based on either a Serial or Ethernet connection:

- Keyboard ID (address) - Serial or Ethernet connections
- Baud rate - Serial connections only
- Joystick speed - Serial or Ethernet connections
- Server IP - Ethernet connections only
- Server Port - Ethernet connections only
- Serial port mode - Serial connections only

Installing and Configuring a Serial Connection

Step 1: Connect to the UltraKey Lite Serial Port

Note For a list of accessories see *Shipping Checklist* on page 18 and for port connections see *UltraKey Lite Port Connections and Descriptions* on page 19.

Note COM1 (RS422) and COM2 (RS485) are configured using the controller LCD menu and cannot be used at the same time. See *Table 4-1* below.

Table 4-1 Serial Port COM1 and COM2 Pin Assignments

Serial Port	Type	Pin	Signal
COM1	RS422	1	RX +
		2	RX -
		5	GND
		7	TX -
		8	TX +
		RS485	7
	8	T/R +	
	COM2	RS232	4
5			GND
6			TXD
RS485		1	T/R +
		2	T/R -

Figure 4-3 RS232 Serial Port Connection

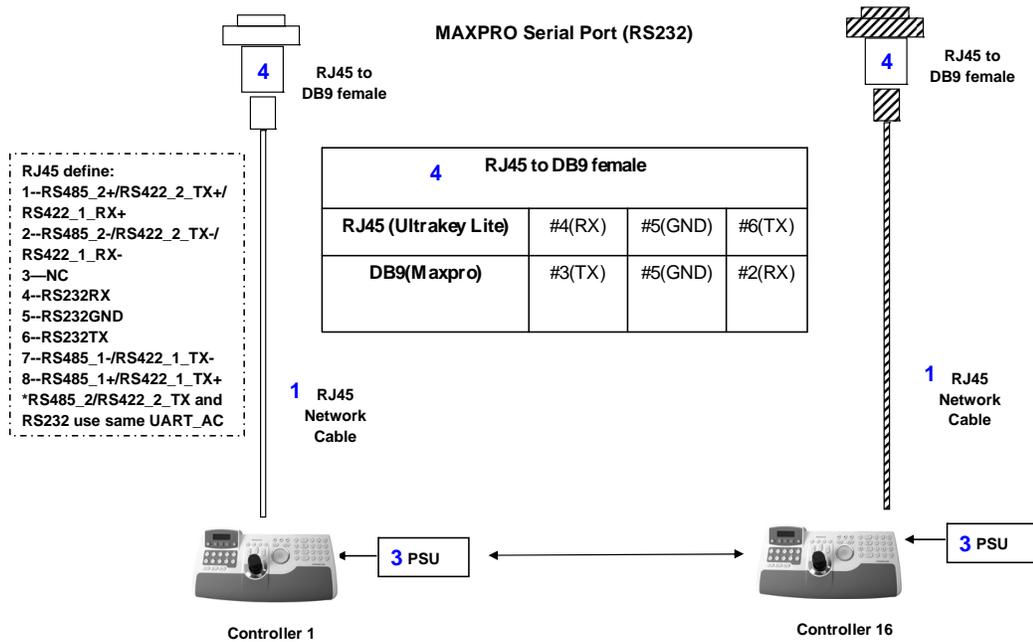

Figure 4-4 RS232 Serial Port Connection and MegaPIT

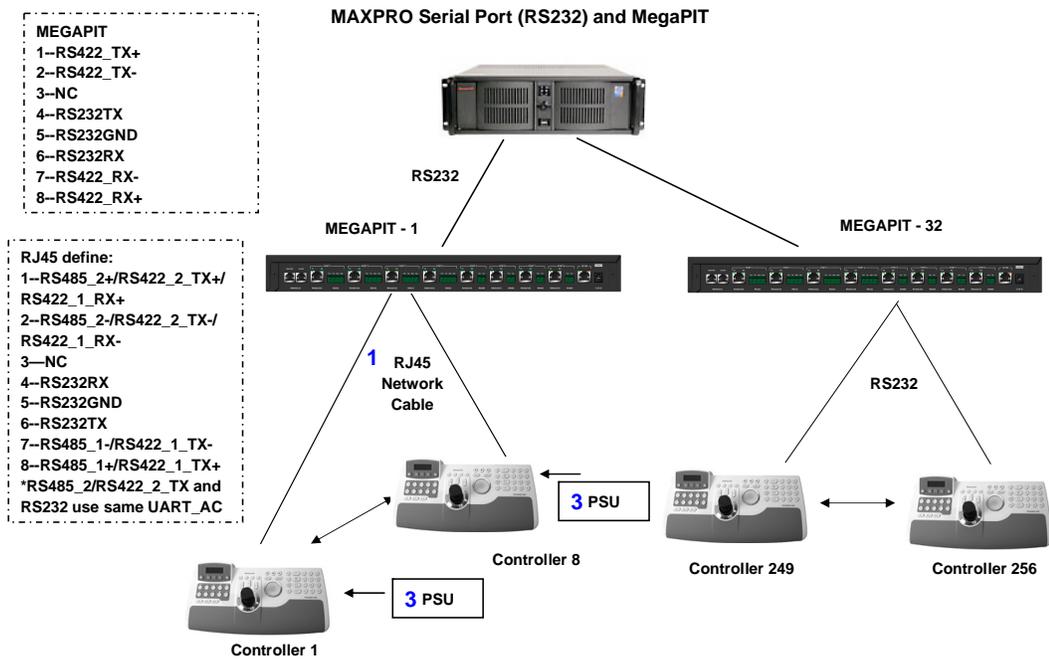

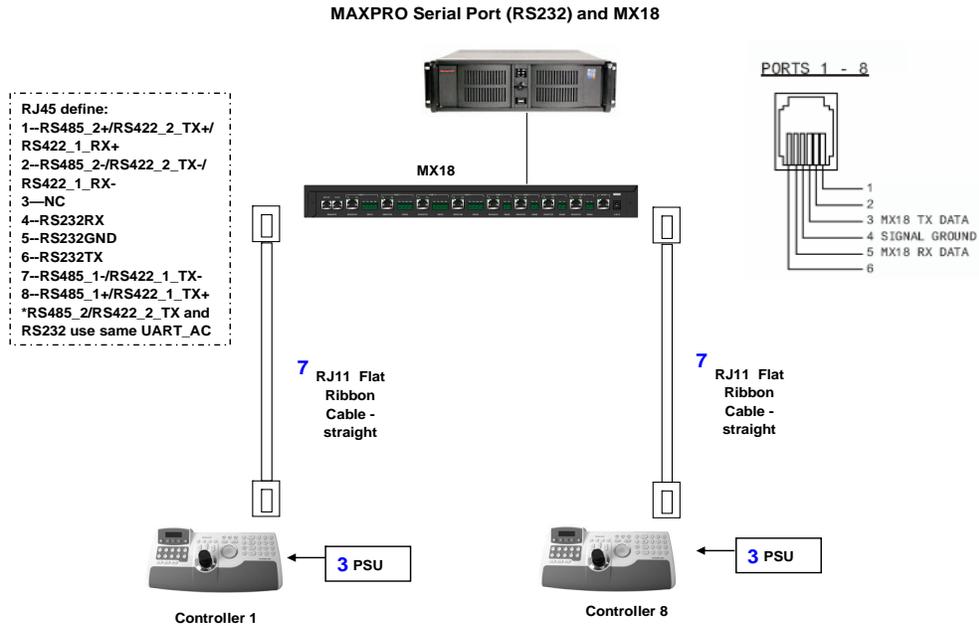

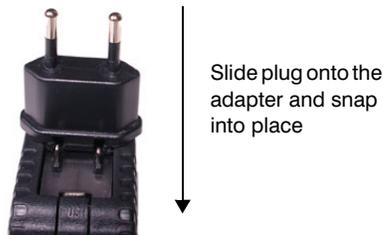

Figure 4-5 RS232 Serial Port Connection and MX18

RS232 Connections with an RJ45 to DB9 Female Adapter

1. Select the applicable adapter plug and insert it into the AC adapter. Push to click it into place. See [Figure 4-6](#).

Figure 4-6 AC Power Adapter with CEE 7/16 Europlug

2. Plug the AC adapter into the controller power port and the adapter into a power source.
3. Connect an RJ45 network cable to the controller serial port.
4. Connect the RJ45 network cable to MAXPRO-Net. For RS232 backwards compatibility with MAXPRO-Net CPUs, plug the RJ45 to DB9 female adapter included with your shipment into the applicable port of MAXPRO-Net. See [Figure 4-7](#).

Figure 4-7 RJ45 to DB9 Female Adapter (RS232)

RS422 Connections Using a Converter and the Terminal Box

1. Select the applicable adapter plug and insert it into the AC adapter. Push to click it into place. See [Figure 4-6](#).
2. Connect an RJ45 network cable from the RJ45 port on the terminal box to the controller serial port.
3. Connect an RS422 cable from the RS422 terminal plug pins on the terminal box to an RS422 to RS232 converter (supplied by the installer or customer).
4. Connect the RS422 to RS232 converter to the MAXPRO-Net RS232 port. See [Figure 4-8](#).

Figure 4-8 RS422 to RS232 Converter Using the Terminal Box (RS422)

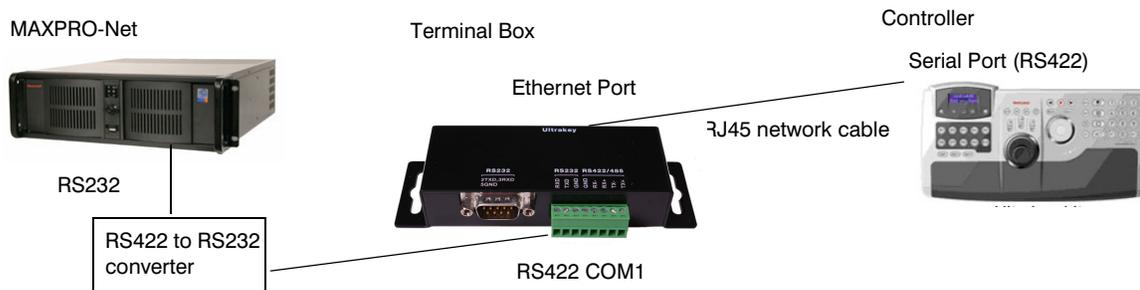

Table 4-2 Terminal Box COM1 and COM2 Pin Assignments

Location	Serial Port	Type	Pin	Signal
DB9 Port	COM2	RS232	2	TXD
			3	RXD
			5	GND
Terminal Plug	COM1	RS422	1	TX+
			2	TX -
			3	RX+
			4	RX -
			5	GND
	COM2	RS485	1	TX+
			2	TX -
		RS232	6	GND
			7	TXD
			8	RXD
COM1	RS485	3	RX+	
		4	RX -	

Figure 4-9 RS232 Serial Port Connection and Terminal Box RS422

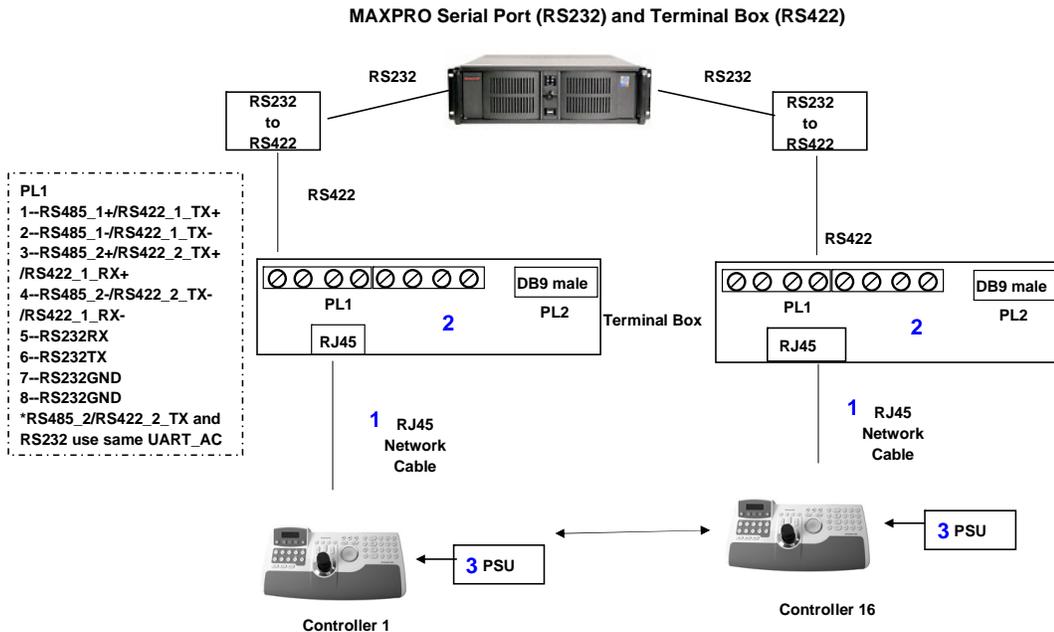

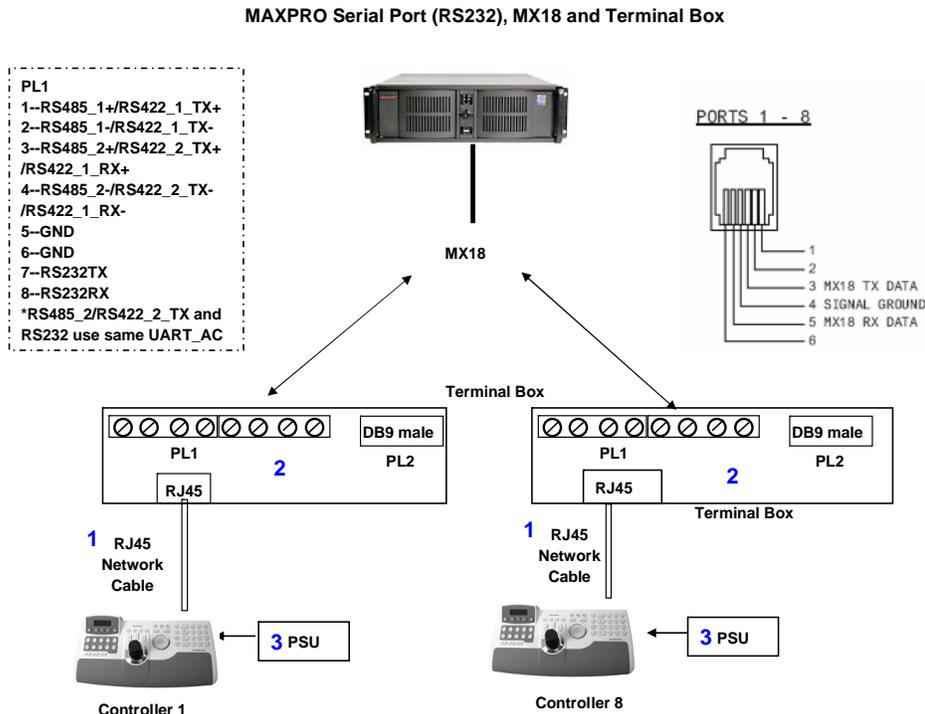

Figure 4-10 RS232 Serial Port Connection, MX18 and the Terminal Box

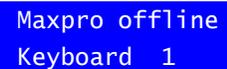

Step 2: Configure the Controller for MAXPRO Mode

Note The controller factory defaults to VideoBloX mode, Address 1, baud rate 19200 bps.

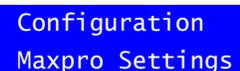

1. If not already done, install and connect the controller to a power source. The UltraKey Lite LCD displays.
2. From the home screen, press **Alt > Clr** to enter the **System Configuration: System Set** menu.
3. Enter the PIN password **3434**. The **System Set: Mode** screen displays.
4. Press the LCD right arrow key to enter the **Mode Selection** menu.
5. Scroll to and select **MAXPRO**. Press **Ent**.
6. From the home screen, press **Alt > Clr** to enter the **System Configuration: System Set** menu. The **System Set: Mode** screen displays.
7. Press the LCD right arrow key to enter the **Mode Selection** menu.
8. Scroll to and select **MAXPRO**. Press **Ent**. MAXPRO Loading displays and one of two screens display:

- If the controller is able to connect to the MAXPRO network, the LCD displays the connection, for example, `fixed camera 1` has sent a signal from MAXPRO to the controller.
- If the controller is not able to connect to the MAXPRO network, the offline menu displays. If this menu displays, you cannot configure the serial or ethernet connections in the next step.

Step 3: Configure Address, Baud Rate, or IP for MAXPRO-Net mode

1. Press **Alt > Clr**. If prompted, enter the password **3434** to enter the **System Setup: Config** menu.
2. Press the right LCD arrow key to enter the **Configuration** menus.
3. Press the LCD up/down arrow keys to scroll through the options (restore default, VB settings, maxpro settings, network, language, back light, slider update, hardware test, about). Scroll to the **Configuration: Maxpro settings** menu, then press **Ent**.
4. Select **By Serial Port** from the MAXPRO connection submenu, then press **Ent**.

Note If the controller cannot connect to the MAXPRO network, then this step cannot be completed until the connection is established. However, the MAXPRO settings menu can be configured even if the controller has not connected to the MAXPRO network; that is, the LCD displays that MAXPRO is offline.

5. Use the LCD up/down arrow keys to select **RS232** or **RS422**, then press **Ent**.
 6. Use the LCD up/down arrow keys to scroll to an address between 1 and 99 to assign to the controller, then press **Ent** to save.
 7. Press the down LCD arrow key to scroll to **Baud Rate**. Press **Ent** and use the up/down arrow keys to select a baud rate of **9600** bps or **19200** bps for the controller. Press **Ent** to save.
-

Note 19200 bps is the default baud rate for most MAXPRO systems.

8. Press the down LCD arrow key to scroll to **Joystick Speed**. Press **Ent** and use the up/down arrow keys to select **Normal** or **High**. Press **Ent** to save.
9. Press the down LCD arrow key to scroll to **Serial Port Mode**. Press **Ent** and use the up/down arrow keys to select **RS232** or **RS422**. Press **Ent** to save.

Maxpro Settings
SerialPortMode:

Note In the following fields, you are setting the MAXPRO-Net Server IP address and port number. To set the UltraKey Lite IP address or enter the main configuration menus, press **Alt > Clr**.

10. Press the down LCD arrow key to scroll to **Server IP**. Press **Ent** and use the up/down arrow keys or the numeric keys to enter the **Server IP** address. Press **Ent** to save.
11. Press the down LCD arrow key to scroll to **Server Port**. Press **Ent** and use the up/down arrow keys or the numeric keys to enter the **Server Port** Address. Press **Ent** to save.
12. After the MAXPRO settings are complete, press **Alt > Clr** to exit the Setup menu.

Maxpro Settings
Server IP:

MaxproServer IP
_59.099.251.132

Maxpro Settings
Server Port:

Step 4: Configure MAXPRO Mode Default Settings While Powering Up

1. While powering up, when the **Time Left 3** menu displays, press **Alt > Monitor** to set the Maxpro mode.
2. Set the corresponding serial port as:

Time Left 3

Baud Rate: **19.2 KB**
 Data Bit: **7**
 Parity: **Even**
 Stop Bit: **1**

Installing and Configuring an Ethernet Connection

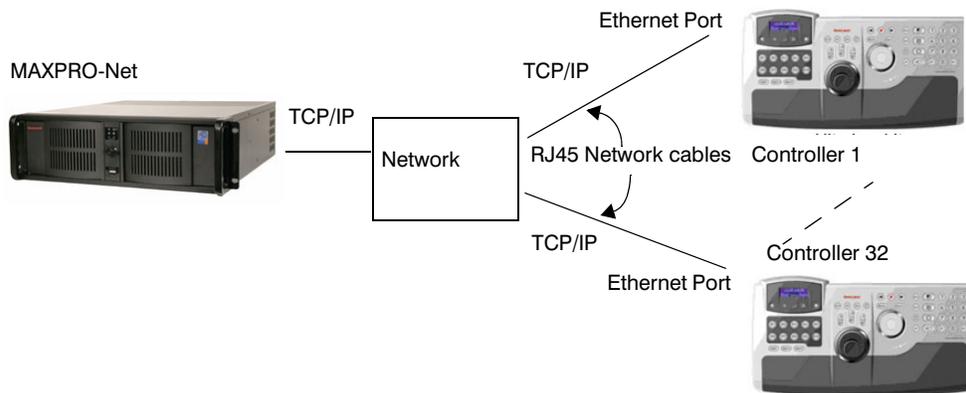

Step 1: Connect to the UltraKey Lite Ethernet Port

Table 4-3 RJ45 Ethernet Pin Assignments

Port	Pin	Signal
RJ45 Ethernet	1	TX +
	2	TX -
	3	RX+
	6	RX -

1. Plug an RJ45 network cable from the network to the controller Ethernet port. Up to 99 controllers can be connected to the network. See [Figure 4-11](#).
2. Connect MAXPRO-Net to the network. Refer to the applicable [MAXPRO-Net Installation Guide](#) for instructions.

Figure 4-11 Ethernet Port Connections to MAXPRO-Net

Step 2: Configure the Controller for MAXPRO Mode

Note The controller factory defaults to VideoBloX mode, Address 1, baud rate 19200 bps. Follow the same steps as with the serial connection, [Step 2: Configure the Controller for MAXPRO Mode](#) on page 54.

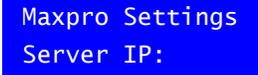

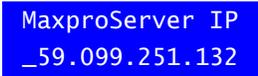

Step 3: Set and Configure for an Ethernet Connection

1. From the MAXPRO connection submenu, select **Ethernet**.

Note If the controller cannot connect to the MAXPRO network, then this first step cannot be completed until the connection is established. However, the MAXPRO settings menu can be configured even if the controller has not connected to the MAXPRO network; that is, the LCD displays that MAXPRO is offline.

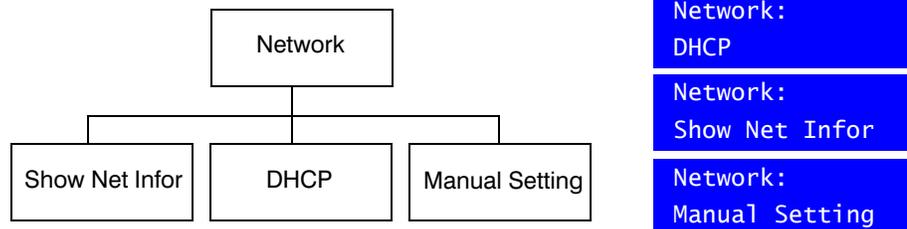

2. Press the LCD center key.
The **Maxpro Settings: Keyboard ID** menu opens. 
3. Press **Ent**.
4. Use the LCD up/down arrow keys to scroll to an address between 1 and 99 to assign to the controller.
5. Press **Ent** to save.
6. Press the down LCD arrow key to scroll to **Joystick Speed**. Press **Ent** and use the up/down arrow keys to select **Normal** or **High**. Press **Ent** to save.

Note In the following fields, you are setting the MAXPRO-Net Server IP address and port number. To set the UltraKey Lite IP address or enter the main configuration menus, press **Alt > Clr**.

7. Press the down LCD arrow key to scroll to **Server IP**. Press **Ent** and use the up/down arrow keys or the numeric keys to enter the **Server IP** address. Press **Ent** to save. 
8. Press the down LCD arrow key to scroll to **Server Port**. Press **Ent** and use the up/down arrow keys or the numeric keys to enter the **Server Port** Address. Press **Ent** to save. 
9. After the MAXPRO settings are complete, press **Alt > Clr** to exit the setup menu. 

Step 4: Configure the Controller for an Ethernet Connection

1. Press **Alt > Clr** to exit from the VideoBloX configuration menu.
2. Press **Alt > Clr** a second time to enter the **System Set** top menu.
3. Press the LCD down arrow key to scroll to the **System Set: Config** menu. System Set:
CONFIG
4. Press the right arrow key to enter the **Configuration** menus.
5. Press the LCD up/down arrow keys to scroll through the options (serial port, network, language, back light, slider update, cascade linkage, hardware test, about).
6. Scroll to the **Configuration: Network** menu, then press **Ent**. Configuration
Network
7. There are three sub-menus in this menu (Show Net Infor, DHCP, and Manual Settings). The structure is as follows:

Show Net Infor Menu

The Show Net Infor Menu displays the Network information, including IP Address, DNS, Gateway, and Netmask.

Automatically Configuring the Network Using DHCP

The Dynamic Host Configuration Protocol (DHCP) is a computer networking protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network. It is used to configure the network automatically.

Automatically configuring the network using the **DHCP** menu:

1. Press the LCD down arrow to scroll to the **Network: DHCP** menu. Network:
DHCP
2. Press **Ent** and the keyboard's network will be configured automatically. Please wait...
 - If the network configuration is successful, then a Succeeded! message displays. Succeeded!
 - If the network configuration was not successful, then a Failed! message displays. Failed!

When the network configures successfully, the user can enter the Show Net Infor menu to see the IP Address, IP Address, DNS, Gateway and Netmask.

Network:
Manual Setting

Manually Configuring the Network

Manually configuring the network using the **Manual Setting** menu:

1. Press the LCD down arrow key to scroll to the **Network: Manual Setting** menu
2. When you are at the Network: Manual Setting menu, press **Ent**, then press the LCD up/down arrow keys to set the UltraKeyLite network parameters (IP address, gateway, netmask and DNS).
3. Press the LCD up/down arrow keys to scroll through the menu options to select **IP Address**, then press **Ent** to select.

Network: IP Address

 - a. Using the numeric key pad, enter an IP address, then press **Ent** to save. The LCD menu displays the message: IPAddr Changed.

IP Address 159.099.251.230

 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent**.

IP Addr Changed Yes

Note In this field, you are setting the UltraKey Lite IP address. To set the VideoBloX IP address (for communication purposes), see [Step 3: Set and Configure for an Ethernet Connection](#).

4. Press the LCD up/down arrow keys to scroll through the menu options and select **Gateway**. Press **Ent**.
 - a. Using the number keys, enter a Gateway as required, then press **Ent** to save. The LCD menu displays the message: GW Changed.
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent**.
5. Press the LCD up/down arrow keys to scroll through the menu options and select **NetMask**. Press **Ent**.
 - a. Using the number keys, enter a NetMask as required, then press **Ent** to save. The LCD menu displays the message: NetMsk Changed.
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent**.
6. Press the LCD up/down arrow keys to scroll through the menu options and select **DNS**. Press **Ent**.
 - a. Using the number keys, enter a DNS as required, then press **Ent** to save. The LCD menu displays the message: DNS Changed.
 - b. Press the up/down arrow keys to select **Yes** to save or **No** to cancel, then press **Ent** to save

Step 5: Setting the Keyboard Address While Powering Up

While powering up, when the **Time Left 3** menu displays, press certain keys (see [Table 4-4](#)) to set the keyboard address.

Table 4-4 **Setting the Keyboard Address**

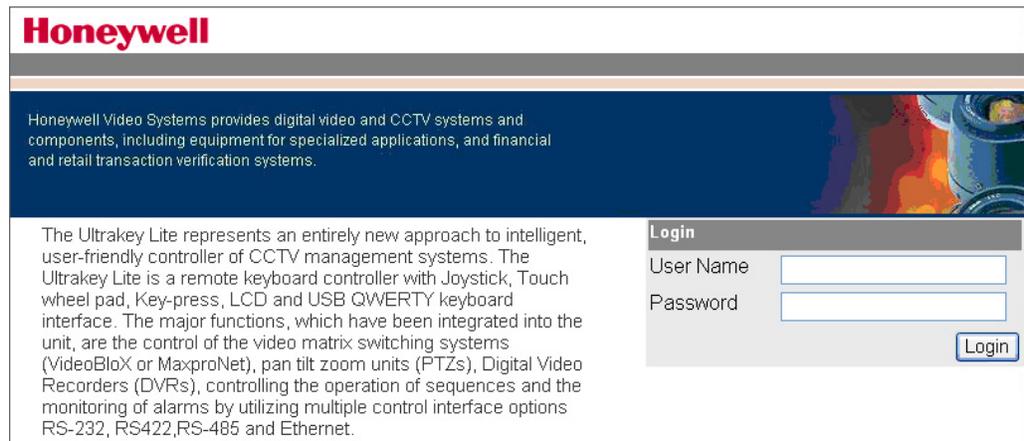

Key	Address	Key	Address
Alt > 1	1	Alt > F1	11
Alt > 2	2	Alt > F2	12
Alt > 3	3	Alt > F3	13
Alt > 4	4	Alt > F4	14
Alt > 5	5	Alt > F5	15
Alt > 6	6	Alt > F6	16
Alt > 7	7	Alt > F7	17
Alt > 8	8	Alt > F8	18
Alt > 9	9	Alt > F9	19
Alt > 0	10	Alt > F10	20

(Optional) Configuring UltraKey Lite Using the Web Browser

Logging into the Web Browser

1. If not already done, navigate to, or copy and paste, the applicable IP address into your web browser:
 - LAN connections: for example, **http://192.168.1.9**
 - Crossover cable connections: for example, **http://192.168.1.9** (default)
2. In the **User Name** field enter **Administrator** (case sensitive).
3. In the **Password** field enter **1234** (default).
4. Click **Login**.

Figure 4-12 UltraKey Lite Login page

Honeywell

Honeywell Video Systems provides digital video and CCTV systems and components, including equipment for specialized applications, and financial and retail transaction verification systems.

The Ultrakey Lite represents an entirely new approach to intelligent, user-friendly controller of CCTV management systems. The Ultrakey Lite is a remote keyboard controller with Joystick, Touch wheel pad, Key-press, LCD and USB QWERTY keyboard interface. The major functions, which have been integrated into the unit, are the control of the video matrix switching systems (VideoBloX or MaxproNet), pan tilt zoom units (PTZs), Digital Video Recorders (DVRs), controlling the operation of sequences and the monitoring of alarms by utilizing multiple control interface options RS-232, RS422,RS-485 and Ethernet.

Login

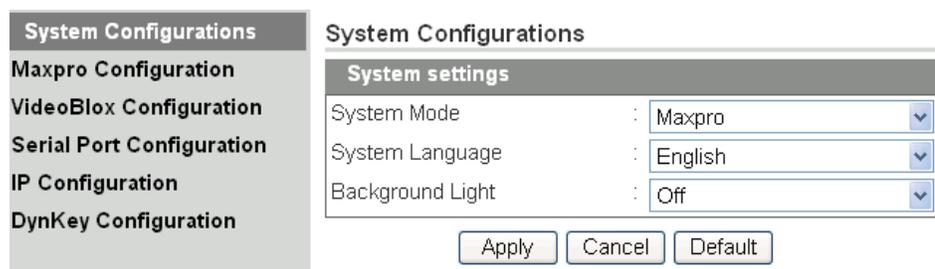

User Name

Password

Step 1: Configure UltraKey Lite to MAXPRO Mode

1. Log into the web browser.
2. From the top menu, click the **Configuration** tab. See [Figure 4-13](#).
3. From the side menu, click the **System Configurations** tab.
4. From the **System Mode** drop-down list, select **MAXPRO**.
5. From the **System Language** drop-down list, select **English** or **French**.
6. From the **Background Light** drop-down list select **ON** or **OFF**.
7. Click **Apply** to save the configuration, **Cancel** to exit without saving or **Default** to restore all factory default values.

Figure 4-13 System Configuration Tab

System Configurations

Maxpro Configuration

VideoBloX Configuration

Serial Port Configuration

IP Configuration

DynKey Configuration

System Configurations

System settings

System Mode : Maxpro

System Language : English

Background Light : Off

Step 2: Configure MAXPRO Network Settings

1. From the side menu, click **MAXPRO Configuration**. See [Figure 4-14](#).
2. Under **Keyboard ID Setting**, enter a number between 1 and 99 to set the controller ID.

3. Enter the **IP address** and **Port Number** of the MAXPRO-Net server under **MAXPRO Device Network Setting**.
4. Under **Serial Port Setting**, select a **Baud Rate** from the drop-down list. Options are **9600** or **19200** bps.
5. Select a **Connect Mode** from the drop-down list. Options are **232** or **422**.
6. From the **Joystick speed** drop-down list, select **Normal** or **High**.
7. Click **Apply** to save the configuration, **Cancel** to exit without saving or **Default** to restore all factory default values.

Figure 4-14 MAXPRO Configuration Tab

The screenshot shows the 'Maxpro Configuration' window. On the left is a sidebar with 'System Configurations' and sub-items: 'Maxpro Configuration' (selected), 'VideoBlox Configuration', 'Serial Port Configuration', 'IP Configuration', and 'DynKey Configuration'. The main area is titled 'Maxpro Configuration' and contains several sections:

- Keyboard ID Setting:** KeyboardID is set to 1. A note below says '(Range: 1 ~ 99)'.
- Maxpro Device Network setting:** IP address is set to 192.168.1.10. A red 'Ping' button is visible to the right of the IP address field. Port number is set to 26026.
- Serial Port setting:** Baudrate is set to 19200 and Connect Mode is set to 232.
- Joystick speed setting:** Joystick Speed is set to Normal.

At the bottom of the window are three buttons: 'Apply', 'Cancel', and 'Default'.

Checking the Network Connection Using the Ping Function

After the IP address is entered and applied, press the **Ping** button.

- A green Ping button indicates the device at this IP address has replied to the ping.
- A red Ping button indicates the device at the IP address did not reply. Please check that the IP address is correct and that there is a valid network path between the two IP addresses.

Step 3A: Configure the Controller for a Serial Port Connection

1. From the side menu, click **Serial Port Configuration**. See [Figure 4-15](#).
2. Under **Serial Port1 Settings**, select the following from each drop-down list as required:
 - **Baud Rate:** 9600 or 19200 bps
 - **Parity:** none, even or odd
 - **Stop Bits:** 1 or 2 bits
 - **Data Bits:** 7 or 8 bits
 - **Serial Mode:** RS232, RS422 or RS485
3. If required, repeat [step 2](#) for **Serial Port2 Settings**.

- Click **Apply** to save the configuration, **Cancel** to exit without saving or **Default** to restore all factory default values.

Figure 4-15 Serial Port Configuration Tab

Serial Port1 settings	
Baud Rate	19200 bps
Parity	None
Stop Bits	1 Stop Bit
Data Bits	8 Data Bits
Serial Mode	RS422

Serial Port2 settings	
Baud Rate	19200 bps
Parity	Even Parity
Stop Bits	1 Stop Bit
Data Bits	7 Data Bits
Serial Mode	RS232

Apply Cancel Default

Step 3B: Configure the Controller for an Ethernet Connection

- From the side menu, click **IP Configuration**.
- In each of the fields, enter **IP address**, **subnet mask**, **gateway** and **DNS** values.
- Click **Apply** to save the configuration, **Cancel** to exit without saving or **Default** to restore all factory default values.

Figure 4-16 IP Configuration Tab

IP Configurations				
IP Address :	159	99	242	221
Subnet Mask :	255	255	255	0
Gateway :	159	99	242	1
DNS :	192	188	1	1

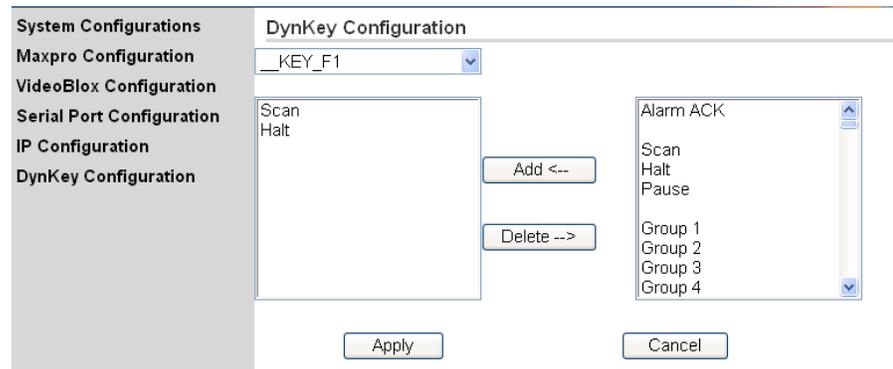

Apply Cancel Default

Step 4: Configuring the Dynamic Keys

You can configure the hard keys on the web server.

- From the side menu, click DynKey Configuration.

Figure 4-17 DynKey Configuration Tab

2. In the drop-down menu, select the key you want to configure.
3. In the right column, select the function you want to add to the hard key, then click **Add**. That selected function appears in the center column.
4. Repeat [step 3](#) to add another function to the selected key.
5. Click **Apply** to save.

Note No more than 10 functions can be configured to a hard key.

Note Neither the number key (#) nor the Logon key can be configured.

5

System Administration and Troubleshooting

In this section:

- *System Administration Using the Controller LCD*, page 65
- *System Administration Using the Web Browser*, page 68

System Administration Using the Controller LCD

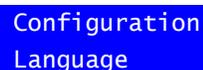

To navigate all configuration LCD menus, see *Figure 5-3* on *page 70*.

Logging in and Navigating to the System Set: Config Menu

1. If not already done, install and connect the controller to a power source. The UltraKey Lite LCD displays.
2. From the home screen, press **Alt > Clr** to enter the **Password** menu.
3. Enter the PIN password **3434**, then click **Enter** or **Login**. The **System Set: Mode** screen displays.

Setting the Screen Language

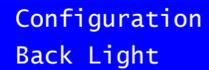

1. Log into the controller.
2. From the **System Set: Config** menu, press the LCD up/down arrow keys to scroll to **Language**. Press **Ent**.
3. Press the LCD up/down arrow keys to scroll through the options and select **English** or **French**. Press **Ent** to save.

Configuration
Language

Adjusting the Back Light

1. Log into the controller.
2. From the **System Set: Config** menu, press the LCD up/down arrow keys to scroll to **Back Light**. Press **Ent**.
3. Use the LCD up and down arrow keys or the rotate the touch pad to adjust the back light intensity.

A blue rectangular box containing the text "Configuration Back Light" in white. The text is arranged in two lines: "Configuration" on the top line and "Back Light" on the bottom line.

Updating the Touch Pad Firmware

Slider firmware should be updated whenever a new slider firmware version is released. Check regularly to make sure that you are using the most up-to-date slider firmware.

Note Slider firmware can be downloaded using the web browser. See [Upgrading the UltraKey Lite Firmware](#) on page 68 to download the firmware. Using the procedure on [page 68](#) will download the slider firmware file, but will not apply the update. Use the following procedure to update the slider firmware after downloading the firmware file.

1. Log into the controller.
2. From the **System Set: Config** menu, press the LCD up/down arrow keys to scroll to **Slider Update**. Press **Ent**.
3. The message Update Confirm? displays.
4. Press the LCD up arrow key to select **Yes** or **No**.
 - Select **Yes** and press **Ent** to upgrade the firmware.
 - Select **No** and press **Ent** to cancel.
5. If you select Yes, the message Slider Firmware: Download displays, followed by Download: OK.
6. Press **Ent** to exit the menu.

Viewing the Firmware Version

1. Log into the controller.
2. From the **System Set: Config** menu, press the LCD up/down arrow keys to scroll to **About**. Press **Ent**.
The LCD scrolls to display the firmware version.
3. Press any key to return to the previous menu.

Testing the Hardware

1. Log into the controller.
2. From the **System Set: Config** menu, press the LCD up/down arrow keys to scroll to **Hardware Test**. Press **Ent**.
3. Press the LCD up/down arrow keys and press **Ent** to select one or all of the following test options:
 - **Key**: When you press a key, the key value and its state is displayed on LCD.
 - **Joystick**: When you move the joystick, values which present the PTZ (pan, tilt, zoom) positions of the joystick are displayed on the LCD.
 - **Serial port**: Confirms that the controller serial port is functioning.
 - **Slider**: When you rotate the touch pad, specific values are displayed on the LCD.
4. Press **Alt > Clr** to exit from these test menus.

Configuration
Hardware test

Restoring Defaults

1. Log onto the controller.
2. Use the LCD up/down arrow keys to scroll to **Restore Default** in the **System Set: Config** menu, then press **Ent**. A confirmation message **Restore Defaults?** appears in the display.
3. Press the LCD up arrow key to select **Yes** or **No**.
 - Select **Yes**, then press **Ent** to restore the defaults.
 - Select **No**, then press **Ent** to cancel.

Configuration
Restore default

Table 5-1 HJC5000 UltraKey Lite Controller Default Settings

Settings	Protocol
Network Settings for the Keyboard	
IP	192.168.1.9
Net Mask	255.255.255.0
GateWay	192.168.1.1
DNS	192.168.1.1
Default Mode: VideoBlox	
Maxpro Mode	
Keyboard ID	1
Serial Port Mode	RS232
Server Port	26026
Server IP	192.168.1.10
Joystick Speed	Normal
Baud Rate	19200 bps

Table 5-1 HJC5000 UltraKey Lite Controller Default Settings (cont'd)

Settings	Protocol
VideoBlox Mode	
Address	1
Baud Rate	19200 bps
Control Mode	Serial Port
IP Address	192.168.1.11
Default Back Light	Off

System Administration Using the Web Browser

Logging into the Web Browser

1. If not already done, navigate to, or copy and paste, the applicable IP address into your web browser:
 - LAN connections: for example, **http://192.168.1.9**
 - Crossover cable connections: for example, **http://192.168.1.9** (default)
2. In the **User Name** field enter **Administrator** (case sensitive).
3. In the **Password** field enter **1234** (default).
4. Click **Login**.

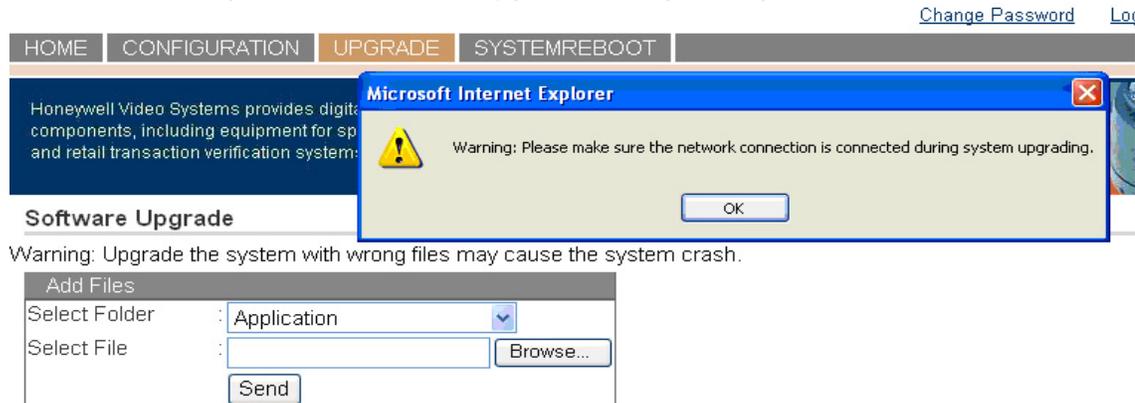

Upgrading the UltraKey Lite Firmware

1. Log into the web browser.
2. From the top menu, click the **Upgrade** tab.
The warning message: Please make sure the network connection is connected during system upgrading displays. See *Figure 5-1*.
3. Click **OK**.
The **Software Upgrade** menu opens.
4. **Select a Folder** from the drop-down list: **Application**, **FPGA**, **Kernel** or **Slider Firmware**.
5. In the **Select File** field, click **Browse**. Navigate to the file and click **OK**.
6. Click **Send** to start the upgrade process.
The Upgrade Status window opens. Messages display to indicate when old files are being erased and new files are being copied.

When the process is complete, the message Upgrade success displays and the system reboots.

WARNING! Do not power off the keyboard during upgrading. Serious damage can occur to the firmware, rendering the keyboard inoperable.

Figure 5-1 Software Upgrade Warning Message

Rebooting UltraKey Lite

1. Log into the web browser.
2. From the top menu, click the **System Reboot** tab. The **Reboot System** window opens.
3. Click **Reboot** to continue or click another tab or Logout to exit without rebooting.

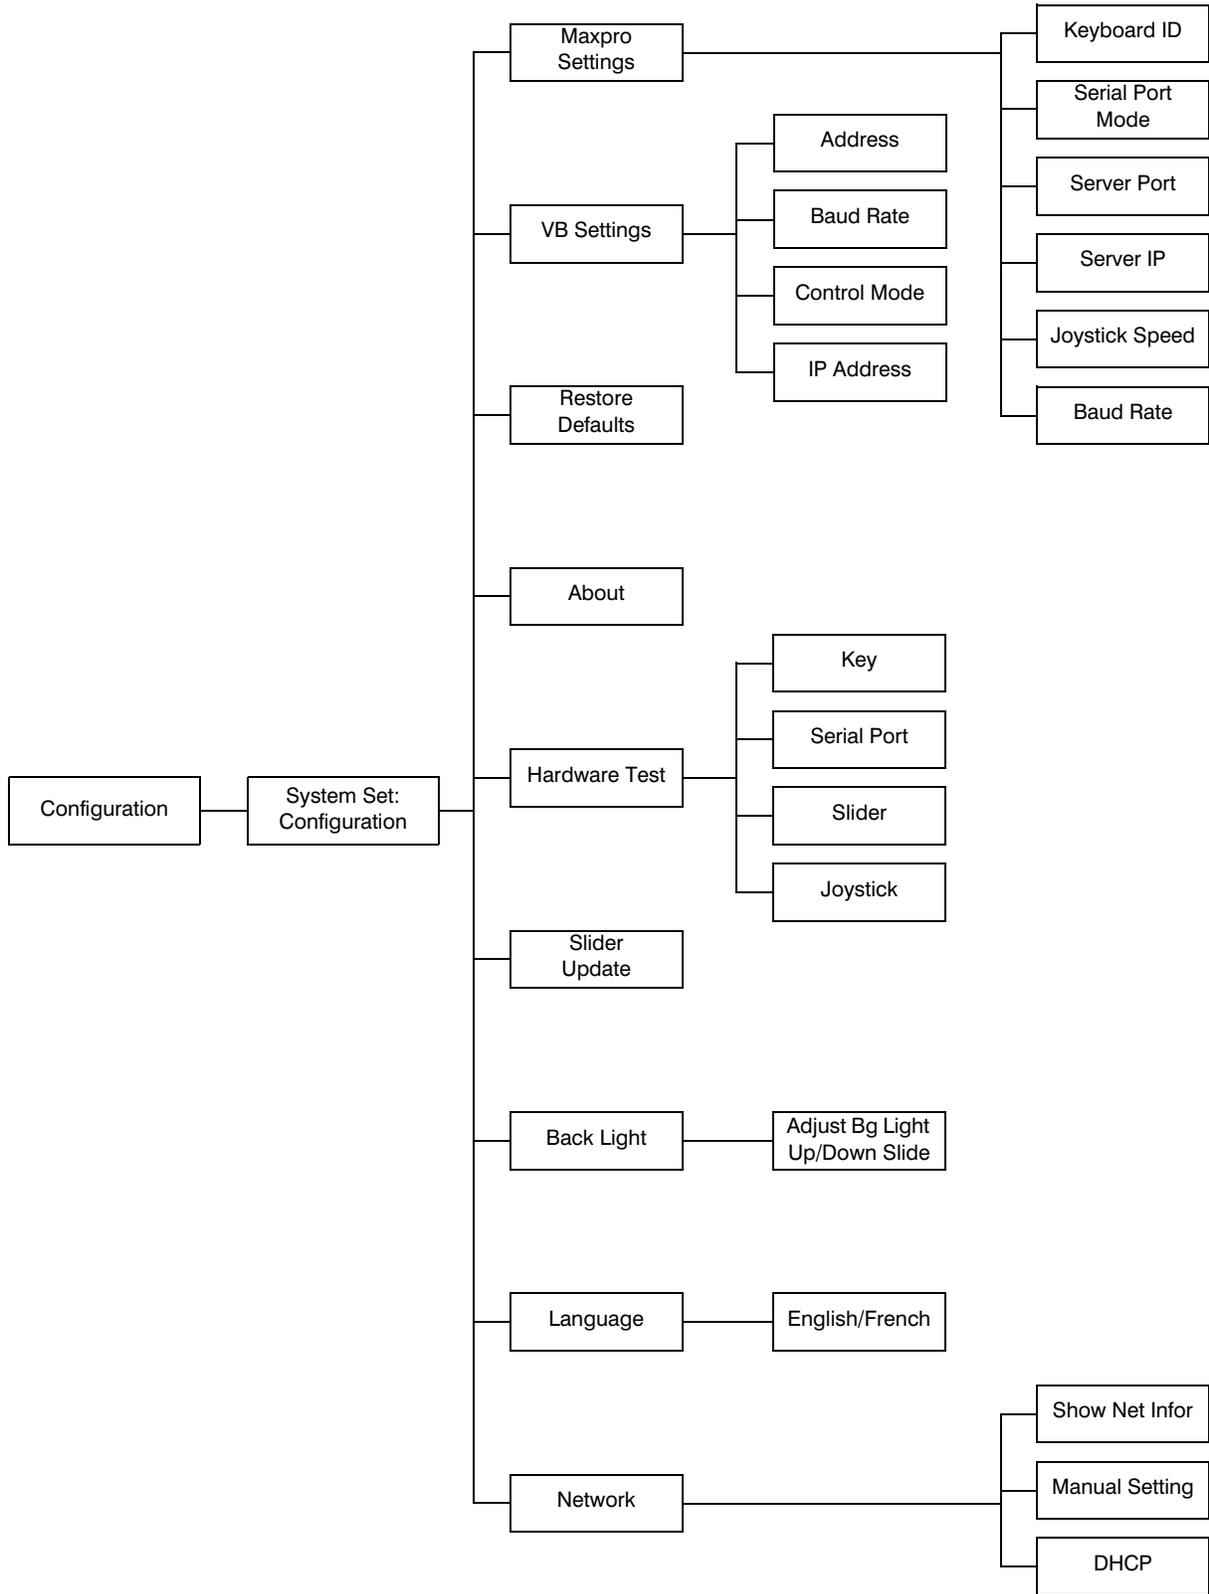

Changing the UltraKey Lite Web Browser Password

1. Log into the web browser.
2. In the upper right corner, click **Change Password**. See [Figure 5-2](#).
3. In the **Old Password** field, enter the current password
4. In the **New Password** field, enter a new password
5. Enter the new password in the **Confirm New Password** field.
6. Click **Apply** to set the new password or **Cancel** to exit without changing it.
